Kelly, 1990 Genetic Conservation of Salmonid Fishes Joseph G. Cloud, Gary H. Thorgaard, 2012-12-06 As the human population increases and nations become more industrialized the habitat and water quality required for the survival of fish continues to decline In addition to these environmental factors fish populations are directly or potentially affected by harvesting enhancement programs and introgression with hatchery propagated or transgenic fish To our knowledge no other scientific meeting has been assembled to consider the breadth of the problem to review the technology that is presently available for the preservation of the germ plasm of salmonid stocks and to identify the scientific advances that are required to overcome the problems Because many salmonids have spawning grounds within the confines of a specific region or county but will spend a large portion of their life cycle within the territorial waters of other countries or in the open ocean the preservation of unique genes or gene pools in these animals requires international cooperation This scientific meeting has provided a forum in which to discuss the problems evaluate the present methods or technology for addressing the problems and suggest new directions or innovations that need to be implemented During this meeting we limited our discussion to salmonid fishes However the general conclusions about the factors that affect the population dynamics of fish stocks and the technical aspects concerning the preservation of germ plasm will be applicable to other fish species Inbreeding and Brood Stock Management Douglas Tave, Food and Agriculture Organization of the United Nations, 1999-01-01 A manual dealing primarily with the problems caused by unwanted inbreeding in cultured fish populations describing management techniques for preventing or minimising inbreeding and also how inbreeding can be used to improve captive populations of fish **Environmental Best Management Practices for Aquaculture** Craig S. Tucker,Edwin H.

Robinson,1990-12-31 **Channel Catfish Farming Handbook** C. S. Tucker,2013-11-11 Although catfish have been farmed for about 30 years and catfish farm ing is the most successful aquacultural enterprise in the United States there are those who contend that catfish farming is still as much of an art as it is a science This position is difficult to refute completely particularly considering that some practices used in catfish farming ap pear to have little scientific basis Skill coupled with a small dose of mysticism certainly playa role in the culture of catfish and the catfish producer is faced with the unenviable task of rearing an animal in an environment that requires considerable management Certain aspects may still be an art because research and technical information needed to support the industry have lagged behind industry growth however the

basic principles underlying catfish farming are based on sound scientific evidence whose foundation was laid in the 1950s by work conducted at state and federal fish hatcheries in the southeastern and midwestern United States. Since that time, several university and government laboratories have expanded the scientific base for catfish farming. As a result, considerable information is available, but it is generally fragmented and exists in a multitude of diverse scientific and trade journals. The material is often too technical or abstract to be comprehensible to fish culturists and personnel in allied industries. This book fits the definition of the term handbook in the sense that it is intended as a book of instruction or guidance as well as a reference.
