Master Control Genes in Development and Evolution Walter J. Gehring,1998-01-01 In this fascinating book one of the world s most eminent developmental biologists discusses some of the exciting new insights into how genes control development Walter Gehring describes in vivid detail his essential contributions to the landmark discovery of the homeobox a characteristic DNA segment found in the genes of all higher organisms from the fruitfly to humans and he explains how this has provided the key to our modern understanding of development and evolution The book thus becomes not only a lucid discussion of genetics but also an engaging description of the art of scientific investigation Gehring begins his story by looking at the work of the many researchers who laid the foundation for the fields of molecular cellular and developmental biology providing insightful vignettes of past and present investigators He then describes his laboratory s hunt for the gene that caused odd mutations in the fruitfly in which for example antennae on the head were transformed into legs He explains that researchers eventually found that the same master control genes that dictate the body plan in flies also pattern human bodies limbs hands heart and brain And he illustrates the universality of the genetic control of development by describing the development of the eye eyes as different as those of humans squids and flies he shows develop under the same master control gene

The Epistemology of Development, Evolution, and Genetics Richard Burian,2005 These essays examine the developments in three fundamental biological disciplines embryology evolutionary biology and genetics These disciplines were in conflict for much of the 20th century and the essays in this collection examine key methodological problems within these disciplines and the difficulties faced in overcoming the conflicts between them Burian skillfully weaves together historical appreciation of the settings within which scientists work substantial knowledge of the biological problems at stake and the methodological and philosophical issues faced in integrating biological knowledge drawn from disparate sources
