Geochemical Exploration Methods For Mineral Deposits:

Marine Mineral Exploration H. Kunzendorf, 1986-05-01 The past 20 years have seen extensive marine exploration work by the major industrialized countries Studies have in part been concentrated on Pacific manganese nodule occurrences and on massive sulfides on mid oceanic ridges An international jurisdictional framework of the sea bed mineral resources was negotiated by the United Nations Conference on the Law of the Sea UNCLOS III A most important outcome of this conference was the establishment of an Exclusive Economic Zone EEZ of at least 200 nautical miles for all coastal states and the recognition of a deep sea regime Mineral deposits in EEZ areas are fairly unknown many areas need detailed mapping and mineral exploration and the majority of coastal or island states with large EEZ areas have little experience in exploration for marine hard minerals This book describes the systematic steps in marine mineral exploration Such exploration requires knowledge of mineral deposits and models of their formation of geophysical and geochemical exploration methods and of data evaluation and interpretation methods These topics are described in detail by an international group of authors A short description is also given of marine research vessels evaluation of marine exploration examples and an overview is provided of the jurisdictional situation after UNCLOS III

Drainage Geochemistry M. Hale, J.A. Plant, 2013-10-22 The considerable exploration success achieved by geochemistry over the last several decades and still continuing has provided both the basis and rationale for the Handbook of Exploration Geochemistry series including Volume 6 Drainage Geochemistry in Mineral Exploration With contributions from 25 experts of truly global professional experience in drainage geochemistry this book is a thorough appraisal of the state of the art in the use of surface and sub surface waters stream and lake sediments heavy minerals for mineral exploration in tropical rain forests temperate glaciated terrains mountain chains arid deserts and regions of agricultural and industrial pollution Additional attention is given to gold and uranium exploration and to the growing role of drainage geochemistry as a multi purpose environmental mapping technique with applications in human health studies ore deposit modelling and pollution monitoring It comprises 16 chapters more than 250 figures and a bibliography of some 1600 references This book is the most extensive and detailed single work on the principles and applications of drainage geochemistry in mineral exploration blending both theoretical considerations and practical implementations
