Abstract: The present study is aimed at assessing the water quality index (WQI) for the ground water in summer season. WQI gives quickly assess the any water system. Water samples from thirty bore wells at various locations in Virudhunagar district area were collected and analyzed for Temperature, pH, electrical conductivity (EC), total dissolved solids (TDS), total alkalinity (TA), total hardness (TH), permanent hardness(PHA), temporary hardness (THA), carbonate, bicarbonate, Cl^- , SO_4^{2-} , SO_3^{2-} , Ca^{2+} , Mg^{2+} , Na^+ , K^+ , dissolved oxygen(DO), biological oxygen demand (BOD), chemical oxygen demand (COD) using standard analytical procedure. The WQI for these samples ranges from 877 to 1475 in summer season. The high values of WQI have been formed to be mainly from the higher values of TDS, TA, TH, Cl^- Ca^{2+} and Mg^{2+} in the ground water. Hydrochemical facies of ground water samples have been ascertained by using piper-trilinear diagram which shows that the study areas are of high saline in nature, evidenced by lime nature of soil. The analysis reveals that the ground water of the area needs some degree of treat before consumption.

Keywords: Ground water quality, Summer season, Piper-trilinear diagram, Water Quality Index.

Introduction And Experimental

Hydro geochemical study of ground waters depend on a number of factors including the nature of recharge, hydrologic gradient, and residence time in the aquifer, pollution by anthropogenic activities and rock-water interactions. Water demand has increased over the years, which leads to water scarcity, in many parts of the world. India is now heading towards a groundwater crisis, mainly, due to improper management of water resources and environmental degradation. Little research work is available on ground water quality and water pollution in Tamil Nadu¹⁻⁴. Many towns in South India are facing significant shortage of drinking water supply due to the lack of monsoon rainfall and water flow in South Indian Rivers, originated from Western ghats. The present study is to investigate the suitability of ground water for potability, impacts on quality and hydrochemical trends with summer season in the period from April to May in Virudhunagar.

Twenty water quality parameters (WQPs) have been examined by using standard recommended procedure⁵. The exact location of the study area in Virudhunagar district namely Srivilliputtur, Rajapalayam, Sivakasi, Sattur, Virudhunagar and Arappukkottai lies between 11° 00' to 12° 00' latitude and 77° 28' to 78° 50' longitude. In order to ascertain the hydro chemical trend, thirty ground water (bore well) samples undertaken in summer season and analyzed.

Ground water potability for potable purposes and interrelationship of hydrochemical trends have also been analyzed by WQI⁶⁻⁸. Graphical methods such as Piper-trilinear diagram have also been applied in order to understand the impact of hydro-geochemistry or anthropogenic sources on ground water quality.

In dem Band werden die Auswirkungen des globalen Wandels hinsichtlich der Nutzung der Ressourcen Wasser und Boden analysiert und mögliche Anpassungsstrategien diskutiert. Auch wenn diese Fragen am Beispiel der Region Berlin Brandenburg untersucht werden haben die Autoren ihre Analysen und Empfehlungen bewusst so ausgestaltet, dass sie auf vergleichbare Regionen übertragen werden können. Mit ihrer interdisziplinären Perspektive bietet diese Untersuchung eine erste Orientierung für die Entwicklung geeigneter Anpassungsstrategien. *5th ICEG Environmental Geotechnics* Hywel R. The central scientific question of the priority program was to improve the knowledge of geochemical processes in seepage and groundwater with the specific aim to quantify the impact of human influences. From the very beginning the priority program was restricted to those questions that could be handled within the limited period of six years. Hence we concentrated on three groups of substances: Natural organic substances, anthropogenic organic substances, i.e. PAK, BTEX, PCB, as well as metals relevant to the environment. This volume has two slightly different objectives. First of all, it represents the international conference GeoProc2002 which took place in Bremen from March 4-7, 2002, a meeting that was designed specifically to address the subject of geochemical processes in seepage and groundwater. Over six years the German Science Foundation DFG funded priority program 546 Geochemical Processes with long-term effects in anthropogenically affected seepage and groundwater. The results of 6 years of research were presented at the GeoProc2002 conference and therefore this book also represents the conclusion of this priority program. **Geochemical Processes, Weathering and Groundwater Recharge in Catchments** O.M. Geochemical Processes: Weathering and Groundwater Recharge in Catchments is a specialist book concerned with the natural processes taking place where water interacts with minerals and organic matter at the earth's surface in soils or within aquifers. It focuses on the all-important interface between the hydrological and geochemical cycles in terrestrial ecosystems and is thus particularly relevant to understanding the environment. The book is intended primarily as a reference text for graduate students in Earth Sciences, Hydrology or Environmental Sciences but will be a useful introduction to those studying Chemistry, Biology or Forestry Studies. *Geochemical Processes: Weathering and Groundwater Recharge in Catchments* presents an overview of the current status of knowledge of catchment studies with an outline of the challenges of future research. *Geochemical Processes* Horst D. Groundwater Geochemistry William J. Deutsch, Randy Siegel, 2020-11-25. **Groundwater Geochemistry: Fundamentals and Applications to Contamination** examines the integral role geochemistry plays in groundwater monitoring and remediation programs and presents it at a level understandable to a wide audience. Readers of all backgrounds can gain a better understanding of geochemical processes and how they apply to groundwater systems. The text begins with an explanation of fundamental geochemical processes followed by a description of the methods and tools used to understand and simulate them. The book then explains how geochemistry applies to contaminant mobility, discusses remediation system design, sampling program development and the modeling of geochemical interactions. This clearly written guide concludes with specific applications of geochemistry to contaminated sites. This is an ideal choice for readers who do not have an extensive technical background in aqueous chemistry, geochemistry or geochemical modeling. The only prerequisite is a desire to better understand natural processes through groundwater geochemistry.

Geochemical and Hydrologic Processes and Their Protection Sidney Draggan, John J. Cochrane, Richard Morrison, Council on Environmental Quality (U.S.). Interagency Subcabinet Committee on Long-term Environmental Research, 1987-06-11. In 1984 the Conference on Environmental Quality, the Environmental Protection Agency and the National Science Foundation convened a series of panel meetings to discuss long term environmental issues. Environmental Impacts on Human Health is the result of that prestigious conference. Drawing on contributions from nationally recognized scientists and experts from industry and government, this collection of papers will help to redirect long term environmental research and development. The book addresses four topic areas: surface and groundwater processes and pollution; land soil processes and pollution; atmospheric oceanic processes and pollution; and multimedia toxic substance hazardous waste research.

Geochemical Processes Horst D. Schulz, Georg Teutsch, 2002-12-25. This book is a result of the Priority Programme 546 run by the Deutsche Forschungsgemeinschaft. It presents the various ideas, concepts and conclusions that resulted from this Programme on the subject of geochemical processes with long term effects in anthropogenically influenced drainage and ground water.
