Geography As Spatial Inter:

Geography as Spatial Interaction Edward Louis Ullman, 1980-01-01, Technologies for Migration and Commuting Analysis: Spatial Interaction Data Applications Stillwell, John, Duke-Williams, Oliver, Dennett, Adam, 2010-05-31 This book addresses the technical and data related side of studying population flows Provided by publisher **Spatial Analysis and GeoComputation** Manfred M. Fischer, 2006-11-22 This volume contains selected essays of Manfred M Fischer in the field of spatial analysis from the perspective of GeoComputation The volume is structured in four parts from broad issues in spatial analysis and the role of GIS to computational intelligence technologies such as neural networks The third part provides the theoretical framework required for adaptive pattern classifiers in remote sensing environments The final section outlines the latest in neural spatial interaction modeling **Accessibility and Spatial Interaction** Ana Condeço-Melhorado, Aura Reggiani, Javier Gutiérrez, 2014-12-31 The concept of accessibility is linked to the level of opportunities available for spatial interaction flows of people goods or information between a set of locations through a physical and or digital transport infrastructure network Accessibility has proved to be a crucial tool for understanding the framework of sustainability policy in light of best practice planning and decision making processes Methods such as cost benefit analysis multi criteria analysis and risk analysis can benefit greatly from embedding accessibility results **Handbook on Entropy, Complexity and Spatial Dynamics** Reggiani, Aura, Schintler, Laurie A., Czamanski, Danny, Patuelli, Roberto, 2021-12-14 This ground breaking Handbook presents a state of the art exploration of entropy complexity and spatial dynamics from fundamental theoretical empirical and methodological perspectives It considers how foundational theories can contribute to new advances including novel modeling and empirical insights at different sectoral spatial and temporal scales Spatial Interaction Models with Land Use Paulo Silveira, Tomaz Ponce Dentinho, 2024-04-25 This book develops spatial interaction models for the analysis of human interaction within space in terms of both accessibility and land use Presenting case studies on the Azores and Morocco it covers applications in various regions of Europe and Africa The respective models simulate land use employment households commuting and shopping movements and land values employment distribution for basic activities changes in accessibility and changes in land suitability due to climate change This book will appeal to scholars and students of regional and spatial science ecological economics and agricultural economics as well as to spatial planners and practitioners dealing with issues of spatial planning to address such problems as unsustainable land use adaptation to climate change desertification of rural areas heavily dependent on land use and the impacts of external shocks on land and property values **Spatial Interaction Modelling** John R. Roy, 2012-09-22 In this book the author's strong commitment to the multi disciplinary field of regional science emerges to provide a unifying framework between spatial modelling traditions from quantitative geography and those from spatial economics whereby each is enhanced Starting with a detailed discussion of each field illustrated with numerical examples the two traditions are

brought together by either making the economic models probabilistic or transforming the objectives of the geographic models to reflect both utility theory and production theory The ideas are applied to develop urban models of activity analysis face to face contacts and housing supply as well as regional models in the areas of input output analysis imperfect competition and interregional migration

The Geography of the Internet Emmanouil Tranos,2013-01-01 This timely book presents a wide range of quantitative methods including complex network analysis and econometric modelling to illustrate how the Internet both follows and at the same time challenges more traditional geographies Emmanouil Tranos explores the spatiality of the Internet its physical infrastructure and the geographic and socio economic factors that shape its spatial distribution He shows that although the Internet is a technical system with strong topological attributes an almost hidden spatial dimension also exists The scattering of Internet Backbone Networks across European city regions is compared with the aviation network in order to better understand the topology of the digital infrastructure Finally a causality analysis demonstrates the significant positive effect of the Internet infrastructure in the economic development of regions characterized by high absorptive capacity This book will prove a highly fascinating read for those with an interest in Internet geographies ICTs regional development and infrastructure digital economy network analysis and regional science Practitioners working on local and regional development as well as those focusing on ICTs digital economy and smart cities will also find this book to be an invaluable reference tool

Spatial Regression Models for the Social Sciences Guangqing Chi,Jun Zhu,2019-03-06 Spatial Regression Models for the Social Sciences shows researchers and students how to work with spatial data without the need for advanced mathematical statistics Focusing on the methods that are commonly used by social scientists Guangqing Chi and Jun Zhu explain what each method is and when and how to apply it by connecting it to social science research topics Throughout the book they use the same social science example to demonstrate applications of each method and what the results can tell us

Principles of Regional Science Zheng Wang,2017-10-17 This book summarizes the research findings in regarding a region as a rational and abstract concept and explores the principles of regional science Focusing on location theory spatial dynamics and regional evolution theory it stresses that the region as a scientific concept is an essential abstract of an economic entity of a place While it introduces a number of case studies the content is general and universal rather than specific Beginning with location theory the basis of regional science it explains how regions breed their own characteristics as economic entities against a background of place For example it discusses the location theory of the tourism industry and analyzes issues of facility location and R D industry location theory The second part of the book addresses interactions with the spatial dynamics including the dynamic mechanism of regions against a background of space Spatial dynamics which includes concepts from statistical physics provides insights into the dynamic mechanism of aggregation diffusion and industrial clustering in regional science as well as in geography and economics The book then describes regional dynamics as a development of spatial dynamics REGION is completely

independent as a research object and is no longer part of spatial dynamics This book also discusses in detail regions as the dynamic characteristics of the economy or the basic characteristics of a certain place and examines the theory of regional evolution It argues that regions are evolution and irreversible features of development with path dependence which are the characteristics of a region that differ from general economic phenomena This book by Professor Zheng Wang is outstanding Its focus on Regional Science will open this area up to a wide variety of theoretical and applied researchers I recommend the work without reservations It covers critically important principles in the field and should be read and used by students faculty and applied researchers doing policy analysis I can see this as an important handbook and reference work as well as a textbook in the field Kingsley Haynes

Population, Place, and Spatial Interaction Rachel S. Franklin, 2019-11-23 This volume is devoted to the geographical or spatial aspects of population research in regional science spanning spatial demographic methods for population composition and migration to studies of internal and international migration to investigations of the role of population in related fields such as climate change and economic growth If spatial aspects of economic growth and development are the flagship of the regional science discipline population research is the anchor People migrate consume produce and demand services People are the source and beneficiaries of national regional and local growth and development Since the origins of regional science demographic research has been at the core of the discipline Contributions in this volume are both retrospective and prospective offering in their ensemble an authoritative overview of demographic research within the field of regional science

Geographic Interpretations of the Internet Aharon Kellerman, 2016-04-26 This book introduces the Internet through a systematic geographical interpretation thus shedding light on the Internet as a spatial entity The book's approach is to extend basic concepts developed for terrestrial geography to cyberspace most notably those relating to space structure place distance mobility and presence It further considers the Internet by its constitution of information space communications space and screen space By using well known concepts from traditional human geography this book proposes a combination of terrestrial and virtual geographies which may in turn help in coping with Internet structures and contents The book appeals to human and economic geographers especially those interested in information and Internet geographies It may also be of special interest and importance to sociologists and media scholars and students dealing with communication technology and the Internet

Applied Spatial Modelling and Planning John R. Lombard, Eliahu Stern, Graham Clarke, 2016-10-04 This book highlights the extraordinary range of areas to which geographical analysis and spatial modelling can bring lessons and insights It shows how these techniques have been used to address real world issues that are of concern to international organisations public agencies and businesses as illustrated by actual funded projects that geographers have developed collaboratively with end users Applied Spatial Modelling and Planning shows how much geographical research is policy relevant to a wide variety of agencies through the use of GIS and spatial modelling in applied geography The book's chapters contain a cross section of innovative applications

and approaches to problem solving within five major domains of the dynamics of economic space housing and settlements population movements and population ageing health care and the environment Using a number of case studies on the use of GIS and spatial modelling this book demonstrates the fact that much of what is done by quantitative geographers is not only relevant within academia but also has use in policy work This book will appeal to an international audience interested in cutting edge spatial modelling to better understand the processes involved in solving real problems *Uneven Development* Neil Smith,2010-01-25 In *Uneven Development* a classic in its field Neil Smith offers the first full theory of uneven geographical development entwining theories of space and nature with a critique of capitalist development Featuring pathbreaking analyses of the production of nature and the politics of scale Smith's work anticipated many of the uneven contours that now mark neoliberal globalization This third edition features an afterword updating the analysis for the present day

The Geography of Transport Systems Jean-Paul Rodrigue,2024-04-30 This expanded and revised sixth edition of *The Geography of Transport Systems* provides a comprehensive and accessible introduction to the field with a broad overview of its concepts methods and areas of application It explores the spatial aspects of transportation and focuses on how the mobility of passengers and freight is linked with geography The book is divided into ten chapters each covering a specific conceptual dimension including networks modes terminals freight transportation urban transportation and environmental impacts and updated with the latest information available The sixth edition offers new and updated material on information technologies and mobility e commerce transport and the economy mobility and society supply chains security pandemics energy and the environment and climate change With over 140 updated figures and maps *The Geography of Transport Systems* presents transportation systems at different scales ranging from global to local This volume is an essential resource for undergraduates studying transportation as well as those interested in economic and urban geography transport planning and engineering A companion website which contains additional material such as photographs maps figures and PowerPoint presentations has been developed for the book and can be found here <https://transportgeography.org>

Spatial Econometric Interaction Modelling Roberto Patuelli,Giuseppe Arbia,2016-07-25 This contributed volume applies spatial and space time econometric methods to spatial interaction modeling The first part of the book addresses general cutting edge methodological questions in spatial econometric interaction modeling which concern aspects such as coefficient interpretation constrained estimation and scale effects The second part deals with technical solutions to particular estimation issues such as intraregional flows Bayesian PPML and VAR estimation The final part presents a number of empirical applications ranging from interregional tourism competition and domestic trade to space time migration modeling and residential relocation

Great Minds in Regional Science Peter Batey,David Plane,2020-07-31 This is the first volume in a new series on *Great Minds in Regional Science* which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science It presents among others Walter Isard Martin Beckmann and Gunnar Myrdal

Each contribution combines factual biographical information a description of their major contributions and a discussion of the broader context of the work as well as an assessment of its current relevance scientific recognition and policy impact The book attempts to fill a gap in our knowledge and to respond to the growing interest in the formation and development of the field of regional science and its key influential figures Spatial Boundaries, Abounding Spaces Mohit Chandna, 2021-06-30 Colonialism advanced its project of territorial expansion by changing the very meaning of borders and space The colonial project scripted a unipolar spatial discourse that saw the colonies as an extension of European borders In his monograph Mohit Chandna engages with narrations of spatial conflicts in French and Francophone literature and film from the nineteenth to the early twenty first century In literary works by Jules Verne Ananda Devi and Patrick Chamoiseau and film by Michael Haneke Chandna analyzes the depiction of ever changing borders and spatial grammar within the colonial project In so doing he also examines the ongoing resistance to the spatial legacies of colonial practices that act as omnipresent enforcers of colonial borders Literature and film become sites that register colonial spatial paradigms and advance competing narratives that fracture the dominance of these borders Through its analyses Spatial Boundaries Abounding Spaces shows that colonialism is not a finished project relegated to our past Colonialism is present in the here and now and exercises its power through the borders that define us **Spatial Econometrics: Methods and Models** L.

Anselin, 1988-08-31 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis
