

# Map Skills Explained

## Compass Directions

- |              |               |
|--------------|---------------|
| N - Never    | NE - Naughty  |
| E - Ear      | SE - Seagulls |
| S - Shredded | SW - Soup     |
| W - Wheel    | W - Water     |

## Latitude

0 degree latitude is called the equator.

Divides the globe into the Northern and Southern hemispheres.

## Longitude

0 degree longitude is called Greenwich Meridian.

Divides the globe into the Western and Eastern hemispheres.

## Four figure grid references

The grid reference is always for the bottom left-hand corner of the grid square you are in.

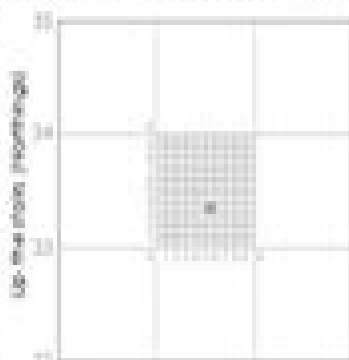

- When giving a four-figure grid reference you should always read 'along the corridor' (horizontal) and then 'up the stairs' (vertical).
- For example, the number 2 in the diagram is 19 across and 45 up and therefore the four-figure grid reference is 1945.

## Six figure grid references

Six figure grid references give an exact place on a map.

- First find the four figure grid reference for the square and write it down with a space after each set of numbers, E.g. 42 33.
- Now imagine the square is divided up into 100 tiny squares with 10 squares along each side.
- Remembering to go along the corridor and up the stairs, work out the extra numbers you need.

## Maps and Symbols

All maps will include a title, scale, north arrow and a key or legend.

	River		Water		Parking		Nature Reserve
	Road		Sand		Camp site		Picnic site
	Motorway		Forest		Viewpoint		Information
	Footpath						

## Topography and Contours

The height and shape of the land is shown on a map using 'contour lines'.

They appear as thin orange or brown lines with numbers on them. The numbers tell you the height above sea level of that line - the higher the number, the higher the land.

A contour line is drawn between points of equal height. Any contour line will be of the same height all the way along the line.

The closer together the contour lines, the steeper the slope of the hill. If a hill is very steep, the contour lines might even merge into each other.

**Big point/ spot height = specific height usually on top of a hill or mountain.**

## Measuring Distance

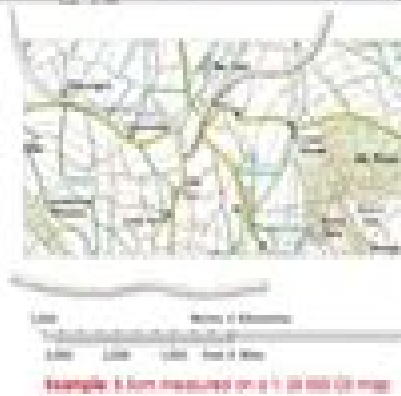

At the bottom of each map there is a scale that indicates the distance on the map.

**Straight line distance** can be measured with a ruler from your start to end point and compared to the map scale.

To get a more accurate distance, try some **string** along your route. Once you have covered the route, mark the end point on the string and compare it to your map scale.

To calculate distance without a printed scale, measure the length of your string against a ruler in cm. You will
