CHIDDER, A. J. & STANLEY, C. J. (eds) 1993. *Quantitative Data File for Ore Minerals*, 3rd ed. 1054-625 pp. London, Glasgow, New York, Tokyo, Melbourne, Madras: Chapman & Hall. Price £75.00 (hard cover). ISBN 0 412 46750 X.

The *Quantitative Data File* is a compilation of reflectance data for some 630 ore minerals, mainly sulphides and oxides, which are arranged alphabetically by mineral name. It is produced to aid the one microscopist who uses reflectance measurements for the identification of the component minerals in a rock or ore in polished section. It has been compiled on behalf of the Commission on Ore Mineralogy of the International Mineralogical Association, by Chidder and Stanley of the Natural History Museum, London, and is the most complete compilation of its kind. Much of the data in the current edition has not previously been published and the editors have gone to considerable lengths to ensure that the majority of the datasets are complemented with accurate chemical data for the specimens used for reflectance measurement. The reflectance data for each mineral are tabulated over the lambda range 400-700 nm at 20 nm intervals, and for many minerals oil immersion reflectance data are also included. A new feature of this edition is the inclusion of reflectance graphs which complement the tabulated data. Vickers & micro-indentation hardness data (VHN) have also been included for minerals where available. The volume is designed to be used in much the same way as the JCPDS X-ray powder diffraction file for solvents, with a search section as well as the reference cards. The introductory section contains a detailed guide to how the datasets were compiled and a thorough explanation of the symbols used throughout the work. One omission from the volume is a reference index with the minerals arranged according to major elements, this would assist chemists, physicists and materials scientists who are unfamiliar with mineral names.

One microscopist is sure to find this volume an indispensable laboratory companion. The editors are to be congratulated for their care and thoroughness in compiling this volume. At £75.00, given its highly specialist nature, the volume is fairly priced.

THAKUR, V. C. 1993. *Geology of Western Himalaya*. Physics and Chemistry of the Earth Series, Volume 18, Parts I-VI. pp. + 366 pp. Oxford, New York, Seoul, Tokyo: Pergamon Press. Price £33.00, US \$300.00 (hard cover). ISBN 0 08 042085 3; ISSN 0379-1945.

This is the second book on Himalayan Geology to be published by Pergamon Press, in the series 'Physics and Chemistry of the Earth'. The first, edited by K. K. Sharma, was a series of papers, whereas this one, written by Thakur is a comprehensive review of the geology of the western Himalaya. Individual chapters deal with the Outer Himalaya, including the Garo basin and intermontane basins; the Lesser Himalaya, the High Himalaya, the Tethys Himalaya and the Trans-Himalaya, the latter including the Karakoram. The final chapter summarizes the structural

synthesis and tectonic evolution of the Himalaya. A concise geological map of the western Himalaya, which is absent in accompanying the book, has not yet been provided but it did not shortly.

The chapters on the Outer and Lesser Himalaya are both extremely useful summaries of the geology. Biostratigraphic and faunal stratigraphy of the Sabathu, Murree, Dharanota and Swatthi groups are dealt with in detail, together with discussions on the environment of deposition and post-deposition data. Magnetic polarity stratigraphy has provided the most significant advances in the stratigraphy of the Neogene sediments and Thakur provides us with a brief review of the recent work in the sub-Himalayan zone. Most work by local Indian geologists has concentrated on the Lesser Himalaya, and the chapter dealing with this is the most useful part of the book. The confusing array of stratigraphy in the Lesser Himalaya is summarized systematically, although there is limited structural data on both the Outer and Lesser Himalaya.

The structural and metamorphic geology of the Higher Himalayan zone is the weakest part of the book. Although the regional descriptions are useful, there is no link between the metamorphic and the strain history, and little on thermobarometry. Perhaps the greatest omission is any meaningful discussion of the Himalayan leucogranites. The chapter on the Tethys Himalaya is a good summary of the stratigraphy of the Proterozoic to Recent sediments of the north Indian plate margin, but again suffers from a lack of a detailed structural picture. Contentious issues, such as the age of obduction of the ophiolites, are not discussed in depth, and there is no serious attempt to explain or quantify the amount of crustal thickening and shortening. The chapter on the Trans-Himalaya includes descriptions of the Indus suture zone, Ladakh batholith, the Kohistan sequence and the Karakoram. The final chapter attempts a regional synthesis. Thakur's style is one of trying to cover the facts in a systematic fashion, rather than entering into tectonic discussions, and his efforts at bringing together all the data under one cover are extremely laudable. The book is the only complete and updated synthesis of western Himalayan geology since Crook's classic book was published in 1964. It is strong on the stratigraphic and historical aspects and less so on the metamorphic and igneous aspects. It is possibly lacking in large-scale tectonic models and does not enter into geographical or climatological details.

In summary this is a very useful synthesis of Himalayan geology in the Indian sector and would be recommended to all students of Himalayan geology, except for one major factor, the price at £35! This book is not an expensive one to produce, at 363 pages length, it has no photographs, either colour or black and white, and this outrageous price is totally unjustified. There has been a trend amongst publishers in the last few years of producing 'university subject' books such as this one and charging a price that is out of all proportion. It is unfair to us, the reading public, or libraries who like to have all good academic books but, most of all, it is unfair to the author, who has put an enormous amount of time and effort into writing the book, only to find that nobody can afford to buy it. The cost of these sorts of books is spiralling out of control and we must
