History of Analytic Geometry Carl B. Boyer,2012-06-28 This study presents the concepts and contributions from before the Alexandrian Age through to Fermat and Descartes and on through Newton and Euler to the Golden Age from 1789 to 1850 1956 edition Analytical bibliography Index

Analytical Geometry Félix González, The conics are very beautiful mathematical objects among these figures perhaps the best known is the circle or the ellipse but there are two others the parabola and the hyperbola All these figures are named after the fact that when cutting a double cone with a plane these objects are formed The object of the present text is to study the conics from the perspective given by the Cartesian plane allowing to represent the points as pairs of numbers and in this way expressing the conics as equations of the second degree in two letters That said in the first part we study the ring of polynomials in general and their arithmetic properties The factorization of polynomials and its application in solving equations is studied Systems of equations are also studied In the second part the conics are studied from their definition as objects in the plane to their equations The topics we are dealing with correspond to a course in algebra and analytical geometry but focused on the study of conics Analytical Geometry of Three Dimensions D. M. Y. Sommerville,2016-02-25 Originally published in 1934 this book starts at the subject s beginning but also engages with profoundly more specialist concepts in the field of geometry

Algebraic Geometry between Tradition and Future Gilberto Bini, 2023-05-05 An incredible season for algebraic geometry flourished in Italy between 1860 when Luigi Cremona was assigned the chair of Geometria Superiore in Bologna and 1959 when Francesco Severi published the last volume of the treatise on algebraic systems over a surface and an algebraic variety This century long season has had a prominent influence on the evolution of complex algebraic geometry both at the national and international levels and still inspires modern research in the area Algebraic geometry in Italy between tradition and future is a collection of contributions aiming at presenting some of these powerful ideas and their connection to contemporary and if possible future developments such as Cremonian transformations birational classification of high dimensional varieties starting from Gino Fano the life and works of Guido Castelnuovo Francesco Severi's mathematical library etc The presentation is enriched by the viewpoint of various researchers of the history of mathematics who describe the cultural milieu and tell about the bios of some of the most famous mathematicians of those times
