Harmonic Analysis, Signal Processing, and Complexity Irene Sabadini,Daniele C. Struppa,David F. Walnut,2008-12-16 Carlos A Berenstein has had a profound influence on scholars and practitioners alike amid a distinguished mathematical career spanning nearly four decades His uncommon capability of adroitly moving between these parallel worlds is demonstrated by the breadth of his research interests from his early theoretical work on interpolation in spaces of entire functions with growth conditions and residue theory to his later work on deconvolution and its applications to issues ranging from optics to the study of blood flow This volume which celebrates his sixtieth birthday reflects the state of the art in these areas Original articles and survey articles all refereed cover topics in harmonic and complex analysis as well as more applied work in signal processing

The Sub-Laplacian Operators of Some Model Domains Der-Chen Chang,Jingzhi Tie,2022-08-01 The book constructs explicitly the fundamental solution of the sub Laplacian operator for a family of model domains in \mathbb{C}^n 1 This type of domain is a good point wise model for a Cauchy Riemann CR manifold with diagonalizable Levi form Qualitative results for such operators have been studied extensively but exact formulas are difficult to derive Exact formulas are closely related to the underlying geometry and lead to equations of classical types such as hypergeometric equations and Whittaker's equations

Contact Geometry of Slant Submanifolds Bang-Yen Chen,Mohammad Hasan Shahid,Falleh Al-Solamy,2022-06-27 This book contains an up to date survey and self contained chapters on contact slant submanifolds and geometry authored by internationally renowned researchers The notion of slant submanifolds was introduced by Prof B Y Chen in 1990 and A Lotta extended this notion in the framework of contact geometry in 1996

Numerous differential geometers have since obtained interesting results on contact slant submanifolds. The book gathers a wide range of topics such as warped product semi slant submanifolds, slant submersions, semi slant hemi slant Riemannian submersions, quasi hemi slant submanifolds, slant submanifolds of metric f manifolds, slant lightlike submanifolds, geometric inequalities for slant submanifolds, 3 slant submanifolds and semi slant submanifolds of almost paracontact manifolds. The book also includes interesting results on slant curves and magnetic curves where the latter represents trajectories moving on a Riemannian manifold under the action of magnetic field. It presents detailed information on the most recent advances in the area making it of much value to scientists, educators and graduate students.

Geometric Mechanics on Riemannian Manifolds Ovidiu Calin, Der-Chen Chang, 2011-03-21. **Electromagnetic Waves** Ahmed Kishk, 2011-07-05. This volume is based on the contributions of several authors in electromagnetic waves propagations. Several issues are considered. The contents of most of the chapters are highlighting non classic presentation of wave propagation and interaction with matters. This volume bridges the gap between physics and engineering in these issues. Each chapter keeps the author notation that the reader should be aware of as he reads from chapter to the other.

Harmonic Analysis and Partial Differential Equations Justin Feuto, Bérenger Akon Kpata, 2024-09-12. This proceedings volume collects selected papers presented at the Harmonic Analysis and Applications Workshop held in Abidjan, Côte d'Ivoire, from May 22-26, 2023. Chapters present surveys and recent research results from experts and cover a range of topics at the intersections of classical and abstract harmonic analysis, PDEs and numerical analysis.

Harmonic Analysis and Applications Christopher Heil, 2007-08-02. This volume is dedicated to John Benedetto. It seems just yesterday that we celebrated his 60th birthday in a memorable conference in College Park. Yet that was October of 1999 and already more than six years have passed. But John is still too young to be fully honored by a single foreword or even a single volume that attempts to summarize the impact of his work on harmonic analysis, his students and his coworkers. Given his continuing high and even increasing level of activities, his list of lifetime achievements

is surely far from complete Even so we will make an attempt in this foreword to take a look back to see the major lines of his work and activities during the past 40 years of his life as a scientist and to learn from his biography and bibliography how the field of harmonic analysis has changed over the years and in particular to see the vibrant role that John has taken in this process John's first paper appeared in 1965 when he was 25 years old and his first book the Springer Lecture Notes on Harmonic Analysis on Totally Disconnected Sets when he was 31 By that time he had already published on the subjects of Tauberian algebras in the theory of generalized functions and on questions related to spectral synthesis His work on this latter topic continued through the 1970s culminating in the insightful volume Spectral Synthesis 1975 Only a year later his text Real Variables and Integration with Historical Notes appeared
