Geometrical Optics in Engineering Physics ИУриĀ Aleksandrovich KravtĀsĀov, 2005 This monograph provides concise and clear coverage of modern ray theory without the need of complicated mathematics Comprehensive coverage is given to wave problems in engineering physics considering rays and caustics as physical objects [Springer Series in Light Scattering](#) Alexander Kokhanovsky, 2017-12-22 This book presents a survey of modern theoretical and experimental techniques in studies of light scattering phenomena and radiative transfer processes in random media It presents reviews on light scattering by sea water and bubbles and includes a separate chapter addressing studies of the remote sensing of crystalline clouds with a focus on the shape of particles a parameter rarely studied by passive remote sensing techniques In particular it offers a comprehensive analysis of polarized radiative transfer in optically active e g chiral light scattering media

and explores advances in spectro polarimetry of particulate media Lastly it discusses new developments in light scattering for combustion monitoring **Physics, Uspekhi** ,1996 **Analysis and Modeling of Radio Wave Propagation**

Christopher John Coleman,2017-01-05 This comprehensive guide helps readers understand the theory and techniques needed to analyze and model radio wave propagation in complex environments All of the essential topics are covered from the fundamental concepts of radio systems to complex propagation phenomena These topics include diffraction ray tracing scattering atmospheric ducting ionospheric ducting scintillation and propagation through both urban and non urban environments Emphasis is placed on practical procedures with detailed discussion of numerical and mathematical methods providing readers with the necessary skills to build their own propagation models and develop their own techniques MATLAB functions illustrating key modeling ideas are provided online This is an invaluable resource for anyone wanting to use propagation models to understand the performance of radio systems for navigation radar communications or broadcasting

Progress in Optics ,1988-05-01 Progress in Optics **Radiation Transfer** L. A. Apresyan,Yu. A Kravtsov,2019-07-16 The authors expound on non traditional phenomena for transfer theory which are nevertheless of considerable interest in wave measurements and bring the advances of transfer theory as close as possible to the practical needs of those working in all areas of wave physics The book opens with a historical overview of the topic then moves on to examine the phenomenological theory of radiative transport blending traditional theory with original ideas The transport equation is derived from first principles and the ensuing discussion of the diffraction content of the transport equation and non classical radiometry is illustrated by practical examples from various fields of physics Popular techniques of solving the transport equation are discussed paying particular attention to wave physics and computing the coherence function The book also examines various problems which are no longer covered by the traditional radiative transfer theory such as enhanced backscattering and weak localization phenomena nonlinear transport problems and kinetic equations for waves This monograph bridges the gap between the simple power balance description in radiative transfer theory and modern coherence theory It will be of interest to researchers and professionals working across a wide range of fields from optics acoustics and radar theory to astrophysics radioastronomy and remote sensing as well as to students in these areas **International Handbook of Earthquake & Engineering Seismology, Part A** William H.K. Lee,Paul Jennings,Carl Kisslinger,Hiroo Kanamori,2002-09-27 Modern scientific investigations of earthquakes began in the 1880s and the International Association of Seismology was organized in 1901 to promote collaboration of scientists and engineers in studying earthquakes The International Handbook of Earthquake and Engineering Seismology under the auspices of the International Association of Seismology and Physics of the Earth s Interior IASPEI was prepared by leading experts under a distinguished international advisory board and team of editors The content is organized into 56 chapters and includes over 430 figures 24 of which are in color This large format comprehensive reference summarizes well established facts reviews relevant theories surveys useful methods and techniques and documents

and archives basic seismic data It will be the authoritative reference for scientists and engineers and a quick and handy reference for seismologists Also available is The International Handbook of Earthquake and Engineering Seismology Part B

Understanding Earth Observation Domenico Solimini, 2016-04-19 This volume addresses the physical foundation of remote sensing The basic grounds are presented in close association with the kinds of environmental targets to monitor and with the observing techniques The book aims at plugging the quite large gap between the thorough and quantitative description of electromagnetic waves interacting with the Earth's environment and the user applications of Earth observation It is intended for scientifically literate students and professionals who plan to gain a first understanding of remote sensing data and of their information content *Geometrical Optics of Inhomogeneous Media* Yurii Aleksandrovich

Kravtsov, 1990-09-10 This monograph is concerned with the fundamentals of up to date geometrical optics treated as an approximate method of wave theory Geometrical optics has changed dramatically over the last two decades Primarily it has acquired a number of novel disciplines space time geometrical optics the quasi isotropic approximation the modern theory of caustics related to catastrophe theory and perturbation techniques for rays to name only a few Another acquisition is the reliable boundaries of applicability for geometrical optics based upon the concept of the Fresnel volume for a ray These recent additions to the field are the focus of discussion in the book We did not attempt to separate study oriented and illustrative material from that intended for professionals but rather we spread it throughout the text to facilitate for the reader the mastering of this attractive intuitively appealing and efficient ray method In preparing the manuscript we used a set of lecture notes devised for All Union Schools on Diffraction and Wave Propagation published in Russian Sections 2 1 4 6 and 10 result from joint efforts of both authors The other material of the book we wrote separately I contributed Sects 2 5 9 and 3 17 and Chap 4 Yu I Orlov prepared the rest Unfortunately he could not take part in the preparation of the English edition as he died in 1982 at the age of 41 on the verge of what would have been great achievements considering his strong and original talent **Electrodynamics of Density Ducts in Magnetized Plasmas** I G Kondratiev, A V Kudrin, T M

Zaboronkova, 2019-08-16 Providing a systematic and self contained treatment of excitation propagation and re emission of electromagnetic waves guided by density ducts in magnetized plasmas this book describes in detail the theoretical basis of the electrodynamics of ducts The classical dielectric waveguide theory in open guiding systems in magnetoplasma is subjected to rigorous generalization The authors emphasize the conceptual physical and mathematical aspects of the theory while demonstrating its applications to problems encountered in actual practice The opening chapters of the book discuss the underlying physical phenomena outline some of the results obtained in natural and artificial density ducts and describe the basic theory crucial to understanding the remainder of the book The more specialized and complex topics dealt with in subsequent chapters include the theory of guided wave propagation along axially uniform ducts finding the field excited by the source in the presence of a duct excitation of guided modes the asymptotic theory of wave propagation along axially

nonuniform ducts and mode re emission from a duct The full wave theory is used throughout most of the book to ensure consistency and the authors start with simpler cases and gradually increase the complexity of the treatment

Electrodynamic Characteristics of Accelerating Cavities N P Sobenin, B V Zverev, 2020-08-13 Now available for the first time in English translation this important book contains extensive material relating to the electrodynamic characteristics of linear accelerators and gives a good overview of the fundamentals of accelerating cavity design The authors describe the experimental methods and measurement techniques essential in this area of research and provide comprehensive data about the electrodynamic characteristics of resonant structures which are widely used in charged particle accelerators and microwave devices Single cavities and coupling chains excited in electrical and magnetic modes are described numerically and analyzed in detail The book also provides a valuable description of the perturbation method which is illustrated using a unique collection of data

Caustics, Catastrophes and Wave Fields Yu.A. Kravtsov, Yu.I. Orlov, 2012-12-06 Caustics Catastrophes and Wave Fields in a sense continues the treatment of the earlier volume 6 Geometrical Optics of Inhomogeneous Media by analysing caustics and their fields on the basis of modern catastrophe theory The present volume covers local and uniform caustic asymptotic expansions The Lewis Kravtsov method of standard functions Maslov's method of canonical operators Orlov's method of interference integrals as well as their modifications for penumbra space time random and other types of caustics All the methods are amply illustrated by worked problems concerning relevant wave field applications
