Logic Colloquium '01 Matthias Baaz, Sy-David Friedman, Jan Krajíček, 2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years but they are now in print once again. This volume, the twentieth publication in the Lecture Notes in Logic series, contains the proceedings of the 2001 European Summer Meeting of the Association for Symbolic Logic held at the Vienna University of Technology. Two long articles present accessible expositions on resolution theorem proving and the determinacy of long games. The remaining articles cover separate research topics in many areas of mathematical logic including applications in computer science, proof theory, set theory, model theory, computability theory, linguistics, and aspects of philosophy. This collection will interest not only mathematical logicians but also philosophical logicians, historians of logic, computer scientists, formal linguists, and mathematicians working in algebra, abstract analysis, and topology.

Some Problems of Unlikely Intersections in Arithmetic and Geometry Umberto Zannier, 2012-03-25 This book considers the so-called Unlikely Intersections, a topic that embraces well-known issues such as Lang's and Manin-Mumford's concerning torsion points in subvarieties of tori or abelian varieties. More generally, the book considers algebraic subgroups that meet a given subvariety in a set of unlikely dimension. The book is an expansion of the Hermann Weyl Lectures delivered by Umberto Zannier at the Institute for Advanced Study in Princeton in May 2010. The book consists of four chapters and seven brief appendixes; the last six by David Masser. The first chapter considers multiplicative algebraic groups, presenting proofs of several developments ranging from the origins to recent results and discussing many applications and relations with other contexts. The second chapter considers an analogue in arithmetic and several applications of this. The third chapter introduces a new method for approaching some of these questions and presents a detailed application of this by Masser and the author to a relative case of the Manin-Mumford issue. The fourth chapter focuses on the Andr  Oort conjecture, outlining work by Pila.

Tame Geometry with Application in Smooth Analysis Yosef Yomdin, Georges Comte, 2004-02-07 The Morse-Sard theorem is a rather subtle result, and the interplay between the high-order analytic structure of the mappings involved and their geometry rarely becomes apparent. The main reason is that the classical Morse-Sard theorem is basically qualitative. This volume gives a proof and also an explanation of the quantitative Morse-Sard theorem and related results, beginning with the study of polynomial or tame mappings. The quantitative questions answered by a combination of the methods of real semialgebraic and tame geometry and integral geometry turn out to be nontrivial and highly productive. The important advantage of this approach is that it allows the separation of the role of high differentiability and that of algebraic geometry in a smooth setting: all the geometrically relevant phenomena appear already for polynomial mappings. The geometric properties obtained are stable with respect to approximation and can be imposed on smooth functions via polynomial approximation.

Manoel, M. C. Romero Fuster, C. T. C. Wall, 2010-10-07 The biennial meetings at São Carlos have helped create a worldwide community of experts and young researchers working on singularity theory with a special focus on applications to a wide variety of topics in both pure and applied mathematics The tenth meeting celebrating the 60th birthdays of Terence Gaffney and Maria Aparecida Soares Ruas was a special occasion attracting the best known names in the area This volume contains contributions by the attendees including three articles written or co authored by Gaffney himself and survey articles on the existence of Milnor fibrations global classifications and graphs pairs of foliations on surfaces and Gaffney's work on equisingularity **Model Theory in Algebra, Analysis and Arithmetic** Lou van den Dries, Jochen Koenigsmann, H. Dugald Macpherson, Anand Pillay, Carlo Toffalori, Alex J. Wilkie, 2014-09-20 Presenting recent developments and applications the book focuses on four main topics in current model theory 1 the model theory of valued fields 2 undecidability in arithmetic 3 NIP theories and 4 the model theory of real and complex exponentiation Young researchers in model theory will particularly benefit from the book as will more senior researchers in other branches of mathematics Subject Guide to Books in Print, 1991 *Motivic Integration and its Interactions with Model Theory and Non-Archimedean Geometry: Volume 1* Raf Cluckers, Johannes Nicaise, Julien Sebag, 2011-09-22 The development of Maxim Kontsevich's initial ideas on motivic

integration has unexpectedly influenced many other areas of mathematics ranging from the Langlands program over harmonic analysis to non Archimedean analysis singularity theory and birational geometry This book assembles the different theories of motivic integration and their applications for the first time allowing readers to compare different approaches and assess their individual strengths All of the necessary background is provided to make the book accessible to graduate students and researchers from algebraic geometry model theory and number theory Applications in several areas are included so that readers can see motivic integration at work in other domains In a rapidly evolving area of research this book will prove invaluable This first volume contains introductory texts on the model theory of valued fields different approaches to non Archimedean geometry and motivic integration on algebraic varieties and non Archimedean spaces **Far East**
