The Geometry of Syzygies David Eisenbud, 2005-02-01 First textbook level account of basic examples and techniques in this area Suitable for self study by a reader who knows a little commutative algebra and algebraic geometry already David Eisenbud is a well known mathematician and current president of the American Mathematical Society as well as a successful Springer author

The Geometry of Syzygies David Eisenbud, 2008-11-01 First textbook level account of basic examples and techniques in this area Suitable for self study by a reader who knows a little commutative algebra and algebraic geometry already David Eisenbud is a well known mathematician and current president of the American Mathematical Society as well as a successful Springer author

The Geometry of Syzygies David Eisenbud, 2015-06-30 **Syzygies and Hilbert Functions** Irena Peeva, 2007-03-20 Hilbert functions and resolutions are both central objects in commutative algebra and fruitful tools in the fields of algebraic geometry combinatorics commutative algebra and computational algebra

Spurred by recent research in this area Syzygies and Hilbert Functions explores fresh developments in the field as well as fundamental concepts **Syzygies** E. Graham Evans, 2011 Commutative Algebra Irena Peeva, 2022-02-18 This contributed volume is a follow up to the 2013 volume of the same title published in honor of noted Algebraist David Eisenbud

s 65th birthday It brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Category Theory Combinatorics Computational Algebra Homological Algebra Hyperplane Arrangements and Non commutative Algebra The book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research **Quantum Field Theory III: Gauge**

Theory Eberhard Zeidler, 2011-08-17 In this third volume of his modern introduction to quantum field theory Eberhard Zeidler examines the mathematical and physical aspects of gauge theory as a principle tool for describing the four fundamental forces which act in the universe gravitative electromagnetic weak interaction and strong interaction Volume III concentrates on the classical aspects of gauge theory describing the four fundamental forces by the curvature of appropriate fiber bundles This must be supplemented by the crucial but elusive quantization procedure The book is arranged in four sections devoted to realizing the universal principle force equals curvature Part I The Euclidean Manifold as a Paradigm Part II Ariadne s Thread in Gauge Theory Part III Einstein s Theory of Special Relativity Part IV Ariadne s Thread in Cohomology For students of mathematics the book is designed to demonstrate that detailed knowledge of the physical background helps to reveal interesting interrelationships among diverse mathematical topics Physics students will be exposed to a fairly advanced mathematics beyond the level covered in the typical physics curriculum Quantum Field Theory builds a bridge

between mathematicians and physicists based on challenging questions about the fundamental forces in the universe macrocosmos and in the world of elementary particles microcosmos

Grassmannians, Moduli Spaces and Vector Bundles David Ellwood, Emma Previato, 2011 This collection of cutting edge articles on vector bundles and related topics originated from a CMI workshop held in October 2006 that brought together a community indebted to the pioneering work of P E Newstead visiting the United States for the first time since the 1960s Moduli spaces of vector bundles were then in their infancy but are now as demonstrated by this volume a powerful tool in symplectic geometry number theory mathematical physics and algebraic geometry In fact the impetus for this volume was to offer a sample of the vital convergence of techniques and fundamental progress taking place in moduli spaces at the outset of the twenty first century This volume contains contributions by J E Andersen and N L Gammelgaard Hitchin s projectively flat connection and Toeplitz operators M Aprodu and G Farkas moduli spaces D Arcara and A Bertram stability in higher dimension L Jeffrey intersection cohomology J Kamnitzer Langlands program M Lieblich arithmetic aspects P E Newstead coherent systems G Pareschi and M Popa linear series on Abelian varieties and M Teixidor i Bigas bundles over reducible curves These articles do require a working knowledge of algebraic geometry symplectic geometry and functional analysis but should appeal to practitioners in a diversity of fields No specialization should be necessary to appreciate the contributions or possibly to be stimulated to work in the various directions opened by these path blazing ideas to mention a few the Langlands program stability criteria for vector bundles over surfaces and threefolds linear series over abelian varieties and Brauer groups in relation to arithmetic properties of moduli spaces

Quantum Field Theory I: Basics in Mathematics and Physics Eberhard Zeidler, 2007-04-18 This is the first volume of a modern introduction to quantum field theory which addresses both mathematicians and physicists at levels ranging from advanced undergraduate students to professional scientists The book bridges the acknowledged gap between the different languages used by mathematicians and physicists For students of mathematics the author shows that detailed knowledge of the physical background helps to motivate the mathematical subjects and to discover interesting interrelationships between quite different mathematical topics For students of physics fairly advanced mathematics is presented which goes beyond the usual curriculum in physics

Recent Advances in Algebraic Geometry Christopher D. Hacon, Mircea Mustață, Mihnea Popa, 2015-01-15 A comprehensive collection of expository articles on cutting edge topics at the forefront of research in algebraic geometry

Syzygies E. Graham Evans, Phillip A. Griffith, 1985 The aim of this book which was originally published in 1985 is to cover from first principles the theory of Syzygies building up from a discussion of the basic commutative algebra to such results as the authors proof of the Syzygy Theorem In the last three chapters applications of the theory to commutative algebra and algebraic geometry are given

Geometry of Moduli Jan Arthur Christophersen, Kristian Ranestad, 2018-11-24 The proceedings from the Abel Symposium on Geometry of Moduli held at Svin ya Rorbuer Svolv r in Lofoten in August 2017 present both survey and research articles on the recent surge of

developments in understanding moduli problems in algebraic geometry Written by many of the main contributors to this evolving subject the book provides a comprehensive collection of new methods and the various directions in which moduli theory is advancing These include the geometry of moduli spaces non reductive geometric invariant theory birational geometry enumerative geometry hyper k hler geometry syzygies of curves and Brill Noether theory and stability conditions Moduli theory is ubiquitous in algebraic geometry and this is reflected in the list of moduli spaces addressed in this volume sheaves on varieties symmetric tensors abelian differentials log Calabi Yau varieties points on schemes rational varieties curves abelian varieties and hyper K hler manifolds

Trends in Commutative Algebra Lucieza L. Avramov,2004-12-13 This book describes the interaction of commutative algebra with other areas of mathematics including algebraic geometry group cohomology and combinatorics

Moduli of Curves Leticia Brambila Paz,Ciro Ciliberto,Eduardo Esteves,Margarida Melo,Claire Voisin,2017-10-03 Providing a timely description of the present state of the art of moduli spaces of curves and their geometry this volume is written in a way which will make it extremely useful both for young people who want to approach this important field and also for established researchers who will find references problems original expositions new viewpoints etc The book collects the lecture notes of a number of leading algebraic geometers and in particular specialists in the field of moduli spaces of curves and their geometry This is an important subject in algebraic geometry and complex analysis which has seen spectacular developments in recent decades with important applications to other parts of mathematics such as birational geometry and enumerative geometry and to other sciences including physics The themes treated are classical but with a constant look to modern developments see Cascini Debarre Farkas and Sernesi s contributions and include very new material such as Bridgeland stability see Macri s lecture notes and tropical geometry see Chan s lecture notes

Extended Abstracts February 2016 Maria Alberich-Carramiñana,Carlos Galindo,Alex Küronya,Joaquim Roé,2018-11-03 This volume contains extended abstracts outlining selected talks and other selected presentations given by participants of the workshop Positivity and Valuations held at the Centre de Recerca Matemàtica CRM in Barcelona from February 22nd to 26th 2016 They include brief research articles reporting new results descriptions of preliminary work or open problems and the outcome of work in groups initiated during the workshop The general subject is the application of valuation theory to positivity questions in algebraic geometry The topics covered range from purely algebraic problems like finite generation of semigroups and algebras defined by valuations and properties of the associated Poincaré series to more geometric questions like resolution of singularities and properties of Newton Okounkov bodies linked with non archimedean geometry and tropical geometry The book is intended for established researchers as well as for PhD and postdoctoral students who want to learn more about the latest advances in these highly active areas of research

Quantum Field Theory II: Quantum Electrodynamics Eberhard Zeidler,2008-09-03 And God said Let there be light and there was light Genesis 1:3 Light is not only the basis of our biological existence but also an essential source of our

knowledge about the physical laws of nature ranging from the seventeenth century geometrical optics up to the twentieth century theory of general relativity and quantum electrodynamics. Folklore Don't give us numbers give us insight. A contemporary natural scientist to a mathematician. The present book is the second volume of a comprehensive introduction to the mathematical and physical aspects of modern quantum field theory which comprehends the following six volumes: Volume I Basics in Mathematics and Physics; Volume II Quantum Electrodynamics; Volume III Gauge Theory; Volume IV Quantum Mathematics; Volume V The Physics of the Standard Model; Volume VI Quantum Gravitation and String Theory. It is our goal to build a bridge between mathematicians and physicists based on the challenging question about the fundamental forces in the macrocosmos (the universe) and microcosmos (the world of elementary particles). The six volumes address a broad audience of readers including both undergraduate and graduate students as well as experienced scientists who want to become familiar with quantum field theory which is a fascinating topic in modern mathematics and physics.

Mathematics and the Historian's Craft Glen van Brummelen, Michael Kinyon, 2005-06-14. The Kenneth May Lectures have never before been published in book form. Important contributions to the history of mathematics by well known historians of science should appeal to a wide audience due to its subject area and accessibility.

Mathematics of Computer Science, Cybersecurity and Artificial Intelligence Cheikh Thiécoumba Gueye, Papa Ngom, Idy Diop, 2024-12-10. This proceedings book gathers selected peer reviewed papers presented at the Fifth Scientific Days of the Doctoral School of Mathematics and Computer Sciences S2DSMCS held from December 20-22, 2023 at Cheikh Anta Diop University in Dakar, Senegal. This collection showcases research activities developed by a new generation of mathematicians and computer scientists from Africa, Europe, Asia and America. By fostering cooperation among both young and experienced researchers, the S2DSMSC conference aligns with other conferences in the region such as Africacrypt, the International Conference on Cryptology in Africa, the Non commutative Algebra and Operator Theory NANCAOT international workshops and the International Conference in Algebra Codes and Cryptology A2C, all with proceedings published by Springer.

Recent Developments in Commutative Algebra Claudia Polini, Claudiu Raicu, Matteo Varbaro, Mark E. Walker, 2021-03-02. This book presents four lectures on Rees rings and blow ups, Koszul modules with applications to syzygies, Gröbner bases and degenerations and applications of Adams operations. Commutative Algebra has witnessed a number of spectacular developments in recent years including the resolution of long standing problems. The new techniques and perspectives are leading to an extraordinary transformation in the field. The material contained in this volume, based on lectures given at a workshop held in Levico Terme, Trento in July 2019, highlights some of these developments. The text will be a valuable asset to graduate students and researchers in commutative algebra and related fields.

Graded Algebras in Algebraic Geometry Aron Simis, Zaqueu Ramos, 2022-03-21. The objective of this book is to look at certain commutative

graded algebras that appear frequently in algebraic geometry By studying classical constructions from geometry from the point of view of modern commutative algebra this carefully written book is a valuable source of information offering a careful algebraic systematization and treatment of the problems at hand and contributing to the study of the original geometric questions In greater detail the material covers aspects of rational maps graph degree birationality specialization combinatorics Cremona transformations polar maps Gauss maps the geometry of Fitting ideals tangent varieties joins and secants Aluffi algebras The book includes sections of exercises to help put in practice the theoretic material instead of the mere complementary additions to the theory
