Knuth, 2010-09-23 A Co Publication of Routledge for the National Council of Teachers of Mathematics NCTM

In recent years there has been increased interest in the nature and role of proof in mathematics education with many mathematics educators advocating that proof should be a central part of the mathematics education of students at all grade levels This important new collection provides that much needed forum for mathematics educators to articulate a connected K 16 story of proof Such a story includes understanding how the forms of proof including the nature of argumentation and justification as well as what counts as proof evolve chronologically and cognitively and how curricula and instruction can support the development of students understanding of proof Collectively these essays inform educators and researchers at different grade levels about the teaching and learning of proof at each level and thus help advance the design of further empirical and theoretical work in this area By building and extending on existing research and by allowing a variety of voices from the field to be heard Teaching and Learning Proof Across the Grades not only highlights the main ideas that have recently emerged on proof research but also defines an agenda for future study *Journal for Research in Mathematics Education*, 2006 *Visualizing Mathematics* Kelly S. Mix, Michael T. Battista, 2018-12-07 This unique volume surveys recent research on spatial visualization in mathematics in the fields of cognitive psychology and mathematics education The general topic of spatial skill and mathematics has a long research tradition but has been gaining attention in recent years although much of this research happens in disconnected subfields This volume aims to promote interaction between researchers not only to provide a more comprehensive view of spatial visualization and mathematics but also to stimulate innovative new directions in research based on a more coordinated effort It features ten chapters authored by leading researchers in cognitive psychology and mathematics education as well as includes dynamic commentaries by mathematics education researchers on cognitive psychology chapters and by cognitive psychologists on mathematics education chapters Among the topics included From intuitive spatial measurement to understanding of units Spatial reasoning a critical problem solving tool in children s mathematics strategy tool kit What processes underlie the relation between spatial skill and mathematics Learning with and from drawing in early years geometry Communication of visual information and complexity of reasoning by mathematically talented students Visualizing Mathematics makes substantial progress in understanding the role of spatial reasoning in mathematical thought and in connecting various subfields of research It promises to make an impact among psychologists education scholars and mathematics educators in the convergence of psychology and education
