Guide To Nature Study For The Use Of Teachers:

Guide to Nature-Study Mattie Rose Crawford, 2015-07-13 Excerpt from Guide to Nature Study For the Use of Teachers

The author has undertaken this work in the hope that it may be helpful to those teachers who are struggling in what to them is a comparatively new field of study. It is hoped that those who have not yet taken advantage of the opportunities which Nature study affords may be induced to consider the benefits of this subject to the pupil and to the general work of the school. The general purpose of the book is to set forth the true aim of Nature study and thus to lay the foundation for correct methods in conducting it. In this it will be noted that emphasis is placed on the education of the child through his self activity and by and through the realities of nature. Part I deals with the Pedagogics of Nature study. It endeavors to show that the best education can be obtained not by studying man alone, his history, language and literature, nor by studying natural science alone, but by taking a stand as it were midway between them and uniting the two. In other words, it is to be obtained by studying man in relation to his environment, physical, intellectual and spiritual. Nature study deals particularly with the child's physical environment and if properly conducted relates this environment to his intellectual and spiritual needs and thus gives him a higher conception of life. Part II endeavors to show through type lessons the mode of dealing with different departments of nature and the method of correlating Nature study with the expressive work of the school, drawing, modelling, composition, literature and reading. Individual rather than collective work is prominent at every step, the how and why of the child are emphasized. It will be readily seen that cram is impossible in true Nature lessons since many of the type questions will require months of observation before they can be answered. Part III must not be regarded as Nature study. About the Publisher: Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com. Teaching Children Science Sally Gregory Kohlstedt, 2010-05-15 In the early twentieth century a curriculum known as nature study flourished in major city school systems streetcar suburbs small towns and even rural one room schools This object based approach to learning about the natural world marked the first systematic attempt to introduce science into elementary education and it came at a time when institutions such as zoos botanical gardens natural history museums and national parks were promoting the idea that direct knowledge of nature would benefit an increasingly urban and industrial nation The definitive history of this once pervasive nature study movement *Teaching Children Science* emphasizes the scientific pedagogical and social incentives that encouraged primarily women teachers to explore nature in and beyond their classrooms Sally Gregory Kohlstedt brings to vivid life the instructors and reformers who advanced nature study through on campus schools summer programs textbooks and public speaking Within a generation this highly successful hands on approach migrated beyond public schools into summer camps afterschool activities and the scouting movement Although the rich diversity of nature study classes eventually lost ground to increasingly standardized curricula Kohlstedt locates its legacy in the living plants and animals in classrooms and environmental field trips that remain central parts of science education today

Nature-Study Frederick L. Holtz, 2015-07-12 Excerpt from *Nature Study A Manual for Teachers and Students* This book is designed as an aid and guide to the practical teacher and as a text book in methods of nature study for normal and training schools Part I is devoted to a discussion of underlying principles and methods A just appreciation of the purpose of nature study and a good technique in teaching are as essential as a knowledge of subject matter especially in a subject like this which must be taught without text books Part II contains appropriate subject matter of a biological nature and practical hints and suggestions on the collection and care of material and the presentation of lessons I have however avoided working out complete lesson plans for the teacher believing it far better to allow her to adapt the subject matter herself to her own conditions and to give an opportunity for originality Emphasis is placed on the teaching of life histories life habits functions and processes and not on mere structure study Of chief importance also in nature study are the adaptations to function and environment the interrelations of plants and animals their economic aspects and practical bearing on human life Part III
