Breeding Insect Resistant Crops for Sustainable Agriculture Ramesh Arora, Surinder

Sandhu, 2017-10-16 This book reviews and synthesizes the recent advances in exploiting host plant resistance to insects highlighting the role of molecular techniques in breeding insect resistant crops It also provides an overview of the fascinating field of insect plant relationships which is fundamental to the study of host plant resistance to insects Further it discusses the conventional and molecular techniques utilized useful in breeding for resistance to insect pests including back cross breeding modified population improvement methods for insect resistance marker assisted backcrossing to expedite the breeding process identification and validation of new insect resistance genes and their potential for utilization genomics metabolomics transgenesis and RNAi Lastly it analyzes the successes limitations and prospects for the development of insect resistant cultivars of rice maize sorghum and millet cotton rapeseed legumes and fruit crops and highlights strategies for management of insect biotypes that limit the success and durability of insect resistant cultivators in the field Arthropod pests act as major constraints in the agro ecosystem It has been estimated that arthropod pests may be destroying around one fifth of the global agricultural production potential production every year Further the losses are considerably higher in the developing tropics of Asia and Africa which are already battling severe food shortage Integrated pest management IPM has emerged as the

dominant paradigm for minimizing damage by the insects and non insect pests over the last 50 years Pest resistant cultivars represent one of the most environmentally benign economically viable and ecologically sustainable options for utilization in IPM programs Hundreds of insect resistant cultivars of rice wheat maize sorghum cotton sugarcane and other crops have been developed worldwide and are extensively grown for increasing and or stabilizing crop productivity The annual economic value of arthropod resistance genes developed in global agriculture has been estimated to be greater than US 2 billion Despite the impressive achievements and even greater potential in minimizing pest related losses only a handful of books have been published on the topic of host plant resistance to insects This book fills this wide gap in the literature on breeding insect resistant crops It is aimed at plant breeders entomologists plant biotechnologists and IPM experts as well as those working on sustainable agriculture and food security

Integrated management of insect pests: Current and future developments Emeritus Prof. Marcos Kogan, Emeritus Prof. E. A. Heinrichs, 2019-10-29 Particular focus on advances in understanding insect species and landscape ecology which provide the foundations for effective IPM Covers latest research on classical conservation and augmentative biological control Reviews key developments in use of entomopathogenic fungi viruses and nematodes

Instant Insights: Integrated pest management in cereal cultivation F. G. Horgan, Abie Horrocks, Melanie Davidson, Paul Horne, Jessica Page, Bonnie Pendleton, Emeritus Prof. E. A. Heinrichs, Dr John E. Foster, 2022-12-20 This collection features four peer reviewed reviews on integrated pest management IPM in cereal cultivation The first chapter describes a holistic approach to IPM using knowledge of the natural regulation of herbivore and weed populations and of natural succession in agricultural wetlands It also highlights the need for an improved understanding of rice ecosystems in a holistic manner to ensure the economic and environmental sustainability of rice production The second chapter provides a brief overview of IPM and reviews the range of control methods available to growers including biological cultural and chemical The chapter considers the implementation of IPM programmes in wheat production and utilises a case study from New Zealand to demonstrate a successful example of it The third chapter discusses key insect pests of sorghum their life cycles and their impact on crop productivity and performance The chapter reviews the use of IPM programmes as a sustainable alternative to controlling pest infestations without the need for insecticides The final chapter examines host plant resistance as an ecological approach to managing crop pests and considers the process of evaluating resistance on the basis of insect behavior The chapter also looks at breeding rice for resistance to insect pests and considers the constraints on the development and deployment of insect resistant plant technology

Genetic Improvement of Field Crops Gustavo A. Slafer, 2021-04-29 Outlining successful breeding techniques to augment the yields of the world s major crops this reference analyzes the physiological and genetic basis for past and potential future increases in crop yields Covering crops with wide differences in morphology photosynthetic rates and nitrogen metabolisms

Genetic Improvement of Field Crops investigates the changes produced by breeders in the physiological attributes affecting wheat grain yield and nitrogen content during the last century discusses those crop characteristics of oats that have already been altered or might be manipulated through breeding to further increase yield potential describes several genetic factors responsible for both yield potential and stress resistance in barley offers insights into the relationship between increases in the yield potential and stress tolerance of corn examines the evolution of sunflower crop yields and yield stability and estimates the contribution of improved cultivars evaluates the effects of breeding on tuber characteristics related to the crop growth and yield of the potato elucidates the possibilities for simultaneous improvement of yield and fiber strength in cotton and identifies the features to be considered in the development of high yielding varieties of rice for different agricultural systems Providing nearly 1600 key literature citations allowing further in depth study of particular topics Genetic Improvement of Field Crops is for plant physiologists and breeders crop and agricultural scientists agronomists biochemists geneticists biotechnologists microbiologists and upper level undergraduate and graduate students in these disciplines

Biotechnological Approaches for Pest Management and Ecological Sustainability Hari C Sharma, 2008-12-17 Due to increasing problems occurring from massive applications of pesticides such as insect resistance to pesticides the use of biotechnological tools to minimize losses from insect pests has become inevitable Presenting alternative strategies for alleviating biotic stresses *Biotechnological Approaches for Pest Management and Ecological Sustain* **Experimental Techniques in Host-Plant Resistance** Akshay Kumar Chakravarthy, Venkatesan Selvanarayanan, 2019-04-24 The earliest land plants evolved around 450 million years ago from aquatic plants devoid of vascular systems The diversification of flowering plants angiosperms during the Cretaceous period is associated with speciation in insects Early insect herbivores were mandibulate but the evolution of vascular plants led to the co evolution of other forms of herbivory such as leaf feeding sap sucking leaf mining tissue borer gall forming and nectar feeding Plant defense against biotic stress is an adaptive evolution by plants to increase their fitness Plants use a variety of strategies to defend against damage caused by herbivores Plant defense mechanisms are either inbuilt or induced Inbuilt mechanisms are always present within the plant while induced defenses are produced or mobilized to the site where a plant is injured Induced defense mechanisms include morphological physiological changes and production of secondary metabolites Host plant resistance HPR is one of the eco friendly methods of pest management It protects the crop by making it less suitable or tolerant to the pest While books on theoretical aspects of HPR are available an exclusive book on the practical aspects is lacking There is a wide gap between the theory and the experimental procedures required for conducting studies on plant resistance for the post graduate students and young researchers A dire need for a book on practical aspects was strongly felt Initially a practical manual was prepared which eventually evolved into the present book We hope this book provides information on major aspects of screening crop germplasm sampling techniques genetic and biochemical basis of HPR behavioural studies on pheromone and

plant volatiles and some of the recent approaches in HPR Further the references provide the scientific articles and books as additional information to readers and workers alike

Plant Bioinformatics Khalid Rehman Hakeem, Adeel Malik, Fazilet Vardar-Sukan, Munir Ozturk, 2017-11-21 This book i introduces fundamental and applied bioinformatics research in the field of plant life sciences ii enlightens the potential users towards the recent advances in the development and application of novel computational methods available for the analysis and integration of plant omics data iii highlights relevant databases softwares tools and web resources developed till date to make ease of access for researchers working to decipher plant responses towards stresses and iv presents a critical cross talks on the available high throughput data in plant research Therefore in addition to being a reference for the professional researchers it is also of great interest to students and their professors Considering immense significance of plants for all lives on Earth the major focus of research in plant biology has been to a select plants that best fit the purposes of human b develop crop plants superior in quality quantity and farming practices when compared to natural wild plants and c explore strategies to help plants to adapt biotic and abiotic environmental stress factors Accordingly the development of novel techniques and their applications have increased significantly in recent years In particular large amount of biological data have emerged from multi omics approaches aimed at addressing numerous aspects of the plant systems under biotic or abiotic stresses However even though the field is evolving at a rapid pace information on the cross talks and or critical digestion of research outcomes in the context of plant bioinformatics is scarce Plant Bioinformatics Decoding the Phyta is aimed to bridge this gap Official Gazette
