Nayak,2013-09-24 *Genetic Variation Among Influenza Viruses* documents the proceedings of ICN UCLA symposium held in Salt Lake City Utah 8 13 March 1981 The symposium brought together people from different disciplines working with the common objective of reducing the ravages of influenza and to expose them to the totality of the problem of influenza The papers presented at the meeting included nearly all major aspects of influenza in which important advances are being made Because of recombinant DNA technology and rapid DNA sequencing a number of genes of influenza virus from a number of strains have been either completely or partially sequenced Among these the gene coding for hemagglutinin HA has been most intensively studied and the HA of one or more strains from each subtype H1 H2 H3 has been completely sequenced Other topics discussed include the question of drift and shift at the genomic level the role of the capped host mRNA in the process of initiation of transcription and the regulation of viral transcription This volume also

includes papers presented by the speakers of the plenary sessions and that of keynote speaker Sir Charles Stuart Harris as well as the selected papers presented in the poster sessions **Biennial Research Report**, 1976 Books in Print Supplement, 1984 Books in Print, 1991 *Subject Guide to Books in Print*, 1983 **Science Citation Index**, 1994 Vols for 1964 have guides and journal lists **Virus Research** California) ICN-UCLA Symposium on Molecular Biology (2nd: 1973: Squaw Valley, 1973 **Options for the Control of Influenza** Alan P. Krug, 2012-12-06 Influenza virus is an important human pathogen frequently causing widespread disease and a significant loss of life Much has been learned about the structure of the virus its genetic variation its mode of gene expression and replication and its interaction with the host immunologic system This knowledge has the potential of leading to approaches for the control of influenza virus In addition research on influenza virus has led to important advances in eukaryotic molecular and cellular biology and in immunology A major focus of this book is the molecular biology of influenza virus The first chapter which serves as an introduction describes the structure of each of the genomic RNA segments and their encoded proteins The second chapter discusses the molecular mechanisms involved in the expression and replication of the viral genome In addition to other subjects this chapter deals with one of the most distinctive features of influenza virus namely the unique mechanism whereby viral messenger RNA synthesis is initiated by primers derived from newly synthesized host cell RNAs in

the nucleus Among the most significant accomplishments in influenza virus research has been the delineation of the three dimensional structure of the two surface glycoproteins of the virus the hemagglutinin and neuraminidase This has provided a structural basis for mapping both the antigenic sites and the regions involved in the major biological functions of these two molecules
