Integrating Geographic Information Systems and Agent-Based Modeling Techniques for Simulating Social and Ecological Processes H. Randy Gimblett, 2002-01-17 This volume presents a set of coherent cross referenced perspectives on incorporating the spatial representation and analytical power of GIS with agent based modelling of evolutionary and non linear processes and phenomena Many recent advances in software algorithms for incorporating geographic data in modeling social and ecological behaviors and successes in applying such algorithms had not been adequately reported in the literature This book seeks to serve as the standard guide to this broad area *GIS and Environmental Modeling* Michael F. Goodchild, Louis T. Steyaert, Bradley O. Parks, Carol Johnston, David Maidment, Michael Crane, Sandi Glendinning, 1996-09-30 GIS and Environmental Modeling Progress and Research Issues Michael F Goodchild Louis T Steyaert Bradley O Parks Carol Johnston David Maidment Michael Crane and Sandi Glendinning Editors With growing pressure on natural resources and landscapes there is an increasing need to predict the consequences of any changes to the environment Modelling plays an important role in this by helping our understanding of the environment and by forecasting likely impacts In recent years moves have been made to link models to Geographical Information Systems to provide a means of analysing changes over an area as well as over time GIS and Environmental Modeling explores the progress made to date in integrating these two software systems Approaches to the subject are made from theoretical technical as well as data stand points The existing capabilities of current systems are described along with important issues of data availability accuracy and error Various case studies illustrate this and highlight the common concepts and issues that exist between researchers in different environmental fields The future needs and prospects for integrating GIS and environmental models are also explored with developments in both data handling and modelling discussed The book brings together the knowledge and experience of over 100 researchers from academic commercial and government backgrounds who work in a wide range of disciplines The themes followed in the text provide a fund of knowledge and guidance for those involved in environmental modelling and GIS The book is easily accessible for readers with a basic GIS knowledge and the ideas and results of the research are clearly illustrated with both colour and black and white graphics GIS Environmental Modelling and Engineering Allan Brimicombe, 2003-08-29 Spatial dimensions need to be properly captured if modelling and engineering techniques are to be successfully applied in addressing environmental problems The links between the geographical information systems GIS that capture this data simulation modelling and engineering offer tremendous possibilities for building versatile support systems for managing the environment GIS Environmental Modelling and Engineering focuses on using GIS and external models to solve real environmental problems promoting the critical thinking needed for the effective applications of these systems and

their analytical outputs Divided into three major sections this textbook first concentrates on defining GIS identifying how data is structured and explaining common functionality The text examines GIS from a technological perspective exploring the evolution of its scientific basis and its synergies with other technologies within a geocomputational paradigm The next section explores modelling from a neutral scientific perspective in its role of simulating phenomena as well as from a more specific perspective in its role within environmental science and engineering The third and largest section looks at how GIS and simulation modelling are joined It provides case studies and covers issues such as interoperability data quality model validity space time dynamics and decision support systems This volume provides seniors and postgraduate students with a structured coherent text that goes beyond introductory subject matter by enabling readers to think critically about the data acquisition process and the results they get from the technology
