Geographical Issues In The Soviet Union:

The Soviet Environment John Massey Stewart, 1992-05-07 This book originally published in 1992 describes the Soviet environment at its crisis point in the late 1980s and early 1990s. Belarus and the Ukraine had as a result of the Chernobyl accident been declared ecological disaster zones and across the country as a whole as many as 20 per cent of the population lived in environmental danger areas and another 35-40 per cent in unsatisfactory conditions. According to a Supreme Soviet Environment Committee report of 1989 80% of all illness in the USSR related either directly or indirectly to environmental problems. In this book leading specialists from both the West and the Soviet Union present a comprehensive analysis of these problems. The contributors examine the aftermath of Chernobyl, the catastrophic causes and effects of the Aral Sea's shrinkage, the environmental issues and public unrest. The depth of analysis in this volume together with the breadth of topics addressed will ensure that it is read by students and specialists of the Soviet Union and environmental issues as well as by all government officials, journalists and industrialists with an interest in the Soviet environment.

Geographical Issues in the Soviet Union David Flint, 1990 A study of the geographical issues such as environmental change and economic and ethnic unrest which have been highlighted in the Soviet Union. It provides a basis for all GCSE examination courses. National Curriculum Key Stage 4 and is linked to a BBC schools television and radio series.

Environmental Management in the Soviet Union Philip R. Pryde, 1991-07-26 In this study of Soviet environmental problems and their management the author examines the pervasive nature of biosphere disruption and environmental contaminants in the country. He discusses the extent to which they are damaging the Soviet populace and the resource base upon which it depends.

Environmental Problems in East-Central Europe Frank Carter, David Turnock, 2002-09-26 In this new edition the progress made in the last decade to solve the environmental problems described in the first edition is assessed. The attempts to bring environmental legislation into line with West European norms is also described. *Environmental Problems of East Central Europe* looks at air and water pollution, modern farming, water supplies, waste management and landscape protection. These topics are placed within economic, social and political profiles as spending on a clean environment must be reconciled with welfare spending and the safeguarding of jobs. European Union assistance, civil society and the work of environmental NGOs are also discussed. All of these matters are considered within the context of the wider geographical area and then by each individual country, including the previously communist states lying to the west of the Soviet Union, now with the former federal states of Czechoslovakia and Yugoslavia broken up into seven different entities, and a review of the former Soviet Union with particular reference to the Baltic States. *Environmental Problems in East Central Europe* provides a wealth of up to date reference material with a vast amount of supporting literature on environmental conditions and the functioning of civil society and a map of each country. The environment is being taken seriously by them all, such is the influence of the Rio sustainability agenda in general and the EU environmental

acquired in particular. The book reveals that Eastern Europe is not a blighted area but in some respects has a higher biodiversity than Western Europe. Although there is enormous waste and inefficiency in energy use, people actually consume relatively little and the East therefore has some lessons for the West in terms of managing on the basis of a fair share of the earth's resources.

An Environmental History of Russia Paul Josephson, Nicolai Dronin, Ruben Mnatsakanian, Alek Cherp, Dmitry Efremenko, Vladislav Larin, 2013-04-08. The former Soviet empire spanned eleven time zones and contained half the world's forests, vast deposits of oil, gas, and coal, various ores, major rivers such as the Volga, Don, and Angara, and extensive biodiversity. These resources and animals, as well as the people who lived in the former Soviet Union (Slavs, Armenians, Georgians, Azeris, Kazakhs, and Tajiks; indigenous Nenets and Chukchi), were threatened by environmental degradation and extensive pollution. This environmental history of the former Soviet Union explores the impact that state economic development programs had on the environment. The authors consider the impact of Bolshevik ideology on the establishment of an extensive system of nature preserves, the effect of Stalinist practices of industrialization and collectivization on nature, and the rise of public involvement under Khrushchev and Brezhnev, and changes to policies and practices with the rise of Gorbachev and the break up of the USSR.

Geographic Notes, 1985. *A Guide to Information Sources in the Geographical Sciences* Stephen Goddard, 1983-01-01. Geography is a wide-ranging discipline and the number of information sources available is truly enormous. These include printed books and journal articles, maps, satellite photographs, archives, statistical information, and much else. One particular problem facing geographers is that when one studies a foreign country, information may be available only in the foreign country and difficult to obtain. This book discusses the information sources available to geographers.

Environmental Resources And Constraints In The Former Soviet Republics Philip Pryde, 2019-06-03. The rapid changes in the former Soviet Union have rendered most pre-1992 works on its environment obsolete. A more specifically geographic approach that highlights the particular situation in each republic and region is offered by Philip R. Pryde's new work, *Environmental Resources and Constraints in the Former Soviet Republics*. Focusing broadly on

Governmental Response to Environmental Challenges in Global Perspective Joseph G. Jabbar, O. P. Dwivedi, 1998 In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations
