Making Population Geography Adrian Bailey,2014-05-01 Making Population Geography is a lively account of the intellectual history of population geography arguing that while population geography may drift in and out of fashion it must continue to supplement its demographic approach with a renewed emphasis on cultural and political accounts of compelling population topics such as HIV AIDS sex trafficking teen pregnancy citizenship and global ageing in order for it to shed light on contemporary society Making Population Geography draws both on the writings of those like Wilbur Zelinsky and Pat Gober who were at the very epicentre of spatial science in the 1960s and those like Michael Brown and Yvonne Underhill Sem

whose post punk introspections of method content and purpose now push the field in new directions Using a wide range of case studies contemporary examples and current research the book links the rise and fall of the key concepts in population geography to the changing social and economic context and to geographys turn towards social theory Referencing the authors classroom experiences both in the US and the UK Making Population Geography will appeal to students studying geography population issues and the development of critical scholarship Transnationalizing Inequalities in Europe Anna Amelina,2016-09-13 Unequal life chances became a key feature of cross border migration to and within the enlarged Europe Combining transnational intersectional and cultural sociological perspectives this book develops a conceptual tool to analyse patterns contexts and mechanisms of these cross border inequalities This book synthesizes the theories of social boundaries and of intersectionality approaching cross border relations as socially generated and as an inherent element of contemporary social inequalities It analyses the mechanisms of cross border inequalities as regimes of intersection relating spatialized cross border inequalities to other types of unequal social relations in terms of gender ethnicity race class etc The conceptual arguments are supported by empirical research on cross border migration in Europe migration of scientists and care workers between Ukraine and Germany This book integrates the analysis of space including cross border categories of global and transnational into intersectionally informed studies of social inequalities Broadly it will appeal to scholars and students in the areas of sociology political sciences social anthropology and social geography In particular it will interest researchers concerned with transnational and global social inequalities the interplay of the categories gender ethnicity and class on the one hand and global and transnational relations on the other theories of space and society and migration and mobility in Europe *International Migration in Europe* James Raymer,Frans Willekens,2008-04-15 At present there is no unified treatment drawing together models to allow a consistent and reliable set of migration flows across countries This text seeks to do exactly that potentially improving policies planning and understanding about migration processes worldwide via the presentation of migration estimation and modeling techniques These modeling techniques are explored from both frequentist and Bayesian perspectives The vital concepts such as missing data and collection methods and their possible harmonization are discussed in depth and there are whole chapters dedicated to both modeling asylum flows and forecasts about the future of international migration
