Crust-Mantle Thermal Structure and Tectonothermal Evolution of the Tibetan Plateau Xianjie Shen, 1996-12

This monograph deals with systematic studies of all relevant thermal aspects of the Tibetan Plateau including terrestrial heat flow measures distribution pattern of observed heat flow along a N-S profile crust mantle thermal structure and North Middle South triple heterogeneity across the whole plateau Main emphasis has been put on the close correlation between

thermal and comprehensive geophysical fields and the intrinsic genetic linkage between tectonic deformation of terranes and thereby induced deep seated and superficial thermal activities and responses This new approach in combination with available geoscientific research results has led to a synthetic idea of integrated tectonothermal evolution of the Tibetan Plateau
