Geometric Analysis And Lie Theory In Mathematics And Physics:

Geometric Analysis and Lie Theory in Mathematics and Physics Alan L. Carey, Michael K. Murray, 1998 Graduate lectures on the interface between mathematics and physics

Lie Theory and Its Applications in Physics Vladimir Dobrev, 2013-04-09 Traditionally Lie Theory is a tool to build mathematical models for physical systems Recently the trend is towards geometrisation of the mathematical description of physical systems and objects A geometric approach to a system yields in general some notion of symmetry which is very helpful in understanding its structure Geometrisation and symmetries are meant in their broadest sense i.e. classical geometry differential geometry groups and quantum groups infinite dimensional super algebras and their representations Furthermore we include the necessary tools from functional analysis and number theory This is a large interdisciplinary and interrelated field Samples of these new trends are presented in this volume based on contributions from the Workshop Lie Theory and Its Applications in Physics held near Varna Bulgaria in June 2011 This book is suitable for an extensive audience of mathematicians mathematical physicists theoretical physicists and researchers in the field of Lie Theory

Lie Theory Jean-Philippe Anker, Bent Orsted, 2012-12-06 Semisimple Lie groups and their algebraic analogues over fields other than the reals are of fundamental importance in geometry analysis and mathematical physics Three independent self contained volumes under the general title Lie Theory feature survey work and original results by well established researchers in key areas of semisimple Lie theory A wide spectrum of topics is treated with emphasis on the interplay between representation theory and the geometry of adjoint orbits for Lie algebras over fields of possibly finite characteristic as well as for infinite dimensional Lie algebras Also covered is unitary representation theory and branching laws for reductive subgroups an active part of modern representation theory Finally there is a thorough discussion of compactifications of symmetric spaces and harmonic analysis through a far reaching generalization of Harish Chandra's Plancherel formula for semisimple Lie groups Ideal for graduate students and researchers Lie Theory provides a broad clearly focused examination of semisimple Lie groups and their integral importance to research in many branches of mathematics

Geometric Approaches to Differential Equations Peter J. Vassiliou, Ian G. Lisle, 2000-03-13 A concise and accessible introduction to the wide range of topics in geometric approaches to differential equations

Foundations of Convex Geometry W. A. Coppel, 1998-03-05 This book on the foundations of Euclidean geometry aims to present the subject from the point of view of present day mathematics taking advantage of all the developments since the appearance of Hilbert's classic work Here real affine space is characterised by a small number of axioms involving points and line segments making the treatment self contained and thorough many results being established under weaker hypotheses than usual The treatment should be totally accessible for final year undergraduates and graduate students and can also serve as an introduction to other areas of mathematics such as matroids and antimatroids combinatorial convexity the theory of polytopes projective geometry and functional analysis

Moufang Loops and Groups with Triality are Essentially the Same Thing J. I. Hall,2019-09-05 In 1925 lie Cartan introduced the principal of triality specifically for the Lie groups of type D4 and in 1935 Ruth Moufang initiated the study of Moufang loops The observation of the title in 1978 was made by Stephen Doro who was in turn motivated by the work of George Glauberman from 1968 Here the author makes the statement precise in a categorical context In fact the most obvious categories of Moufang loops and groups with triality are

not equivalent hence the need for the word essentially

Automorphisms of Two-Generator Free Groups and Spaces of Isometric Actions on the Hyperbolic Plane William Goldman, Greg McShane, George Stantchev, Ser Peow Tan, 2019-06-10 The automorphisms of a two generator free group F acting on the space of orientation preserving isometric actions of F on hyperbolic 3 space defines a dynamical system Those actions which preserve a hyperbolic plane but not an orientation on that plane is an invariant subsystem which reduces to an action of a group on by polynomial automorphisms preserving the cubic polynomial and an area form on the level surfaces

Differential Function Spectra, the Differential Becker-Gottlieb Transfer, and Applications to Differential Algebraic K-Theory Ulrich Bunke, David Gepner, 2021-06-21 We develop differential algebraic K theory for rings of integers in number fields and we construct a cycle map from geometrized bundles of modules over such a ring to the differential algebraic K theory We also treat some of the foundational aspects of differential cohomology including differential function spectra and the differential Becker Gottlieb transfer We then state a transfer index conjecture about the equality of the Becker Gottlieb transfer and the analytic transfer defined by Lott In support of this conjecture we derive some non trivial consequences which are provable by independent means
