Multi-Modal Human Modeling, Analysis and Synthesis Jun Yu, Changwei Luo, Chang Wen Chen, 2025-10-21 In today's world where intelligent technologies are deeply transforming human computer interaction and virtual reality multi modal human modeling analysis and synthesis have become central topics in computer vision As application scenarios grow increasingly complex new technologies continue to emerge to address these challenges These techniques demand systematic summarization and practical guidance To meet this need Multi Modal Human Modeling Analysis and Synthesis aims to adopt a structured perspective building a comprehensive technical framework for multi modal human modeling analysis and synthesis progressing from local details to holistic perspectives and from face features to body dynamics This book begins by examining the anatomy structures and characteristics of human faces and bodies then analyzes how traditional methods and deep learning approaches provide robust optimization solutions for modeling For example it explores how to address challenges in face recognition caused by lighting changes occlusions face expressions and aging as well as methods for body localization reconstruction recognition and anomaly detection in multi modal scenarios It also explains how multi modal data can drive realistic face and body synthesis A standout feature is its focus on Huawei's MindSpore framework bridging the gap between algorithms and engineering through practical case studies From building face detection and recognition pipelines with the MindSpore toolkit to accelerating model training via automatic parallel computing and solving large language model LLM training challenges each step is supported by reproducible code and design logic Designed for researchers and engineers in computer vision and AI this book balances theoretical foundations with industry ready technical details Whether you aim to enhance the reliability of biometric recognition explore creative possibilities in virtual real interactions or optimize the deployment of deep learning frameworks this guide serves as an essential link between academic advancements and real world applications

Contemporary Art and Anthropology Arnd Schneider, Christopher Wright, 2020-09-02 Contemporary Art and Anthropology takes a new and exciting approach to representational practices within contemporary art and anthropology Traditionally the anthropology of art has tended to focus on the interpretation of tribal artifacts but has not considered the impact such art could have on its own ways of making and presenting work The potential for the contemporary art scene to suggest innovative representational practices has been similarly ignored This book challenges the reluctance that exists within anthropology to pursue alternative strategies of research creation and exhibition and argues that contemporary artists and anthropologists have much to learn from each others practices The contributors to this pioneering book consider the work of artists such as Susan Hiller Francesco Clemente and Rimer Cardillo and in exploring topics such as the possibility of shared representational values aesthetics and modernity and tattooing they suggest productive new directions for practices in both fields
