Guidance And Control Of Spacecraft:

Guidance and Control of Spacecraft, Etc. [With Illustrations.]. Edward Hymoff, 1966 **Guidance and Control of Spacecraft** Edward Hymoff, 1966 **Spacecraft Guidance and Control** J. R. Scull, 1966 **Guidance, Navigation, and Control for Spacecraft Rendezvous and Docking: Theory and Methods** Yongchun Xie, Changqing Chen, Tao Liu, Min Wang, 2021-02-16 This book focuses on the theory and design methods for guidance navigation and control GNC in the context of spacecraft rendezvous and docking RVD The position and attitude dynamics and kinematics equations for RVD are presented systematically in accordance with several different coordinate systems including elliptical orbital frame and recommendations are supplied on which of these equations to use in different phases of RVD The book subsequently explains the basic principles and relative navigation algorithms of RVD sensors such as GNSS radar and camera type RVD sensors It also provides guidance algorithms and schemes for different phases of RVD including the latest research advances in rapid RVD In turn the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for RVD Emphasis is placed on the design method of active and passive trajectory protection in different phases of RVD and on the safety design of the RVD mission as a whole For purposes of verification the Shenzhou spacecraft's in orbit flight mission is introduced as well All issues addressed are described and explained from basic principles to detailed engineering methods and examples providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for GNC system design in RVD *Spacecraft Guidance and Control* J. R. Scull, 1966 **Control, Guidance and Navigation of Spacecraft** NASA-University Conference on the Science and Technology of Space Exploration, Chicago, 1962, 1986 *Guidance and Control Technology of Spacecraft on Elliptical Orbit* Fucheng Liu, Shan Lu, Yue Sun, 2018-08-14 This book introduces readers to the navigation guidance and control technologies involved in single spacecraft double spacecraft and multiple spacecraft tasks in elliptical orbits It comprehensively covers the key technologies of guidance navigation and control GNC system design for spacecraft in elliptical orbits including the orbit design formation configuration design and maintenance autonomous navigation technology and relative navigation technology as well as autonomous rendezvous technology The methods that this book introduces are very close to actual practical engineering applications and presented in an accessible style The book can serve as reference teaching material for senior undergraduates and postgraduates with space navigation related majors while also providing essential information and guidance for research personnel and engineering technical personnel engaged in the development of GNC systems for spacecraft **Guidance, Navigation, and Control for Spacecraft Rendezvous and Docking: Theory and Methods** Yongchun Xie, Changqing Chen, Tao Liu, Min Wang, 2021 This book focuses on the theory of and design methods for guidance navigation and control GNC in the context of spacecraft rendezvous and docking RVD The position and attitude dynamics and kinematics equations for RVD are presented systematically and in accordance with several different

coordinate systems including elliptical orbital frame and recommendations are supplied on which of these equations to use in different phases of RVD. The book subsequently explains the basic principles and relative navigation algorithms of RVD sensors such as GNSS radar and camera type RVD sensors. It also provides guidance algorithms and schemes for different phases of RVD including the latest research advances in rapid RVD. In turn, the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for RVD. Emphasis is placed on the design method of active and passive trajectory protection in different phases of RVD and on the safety design of the RVD mission as a whole. For purposes of verification, the Shenzhou spacecraft's in-orbit flight mission is presented as well. All issues addressed are described and explained from basic principles to detailed engineering methods and examples, providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for GNC system design in RVD.

Guidance, Control and Docking for CubeSat-based Active Debris Removal Mohamed Khalil Ben-Larbi, 2023-08-07. While a paradigm shift in space industry has already started involving mass production of higher standardized large distributed systems such as constellations, there are no effective solutions existing for the mass removal of satellites. Many indicators point to a further increase in the space traffic in Earth orbit in the near future which could imply new dynamics in the evolution of the space debris environment. Even in case of diligent compliance with the Inter Agency Space Debris Coordination Committee (IADC) mitigation guidelines, the growth in space traffic complicates its management and drastically increases the probability of accidents and system failures. NASA scientist Donald J. Kessler proposed a scenario in which the density of objects in low Earth orbit is high enough that collisions between objects could cause a cascade that renders space unusable for many

generations Therefore a reliable and affordable capability of removing or servicing non functional objects is essential to guarantee sustainable access to Earth orbit Recently the CubeSat design standard introduced a new class of cost efficient small spacecraft and thereby offers a potential solution to the active debris removal ADR problem The development of a novel CubeSat compatible ADR technology has significant advantages such as the use of commercial off the shelf parts reduced launch cost and reduced design efforts This thesis presents in the frame of an ADR mission an approach to advanced rendezvous and docking with non cooperative targets via CubeSat It covers the design process of simulation systems used for verification purposes the ideation and implementation of novel guidance control and docking techniques as well as their verification and evaluation The outcome of this research is a series of validated software tools processes technical devices and algorithms for automated approach and docking that have been tested in simulation and with prototype hardware

Guidance and Control of a Spacecraft to Rendezvous and Dock with a Non-cooperative Target Anantha Sayanam

Komanduri, 2011-11-22 Non cooperative spacecrafts are those current or future assets in orbit which have lost their control authority in one or more degrees of freedom and cannot convey any information concerning their position attitude or rates to facilitate Rendezvous and Docking Berthing RVD B process A growing field of study in space research is to develop On Orbit Servicing OOS technology capable of dealing with these space crafts called targets which are designed without any intention to be serviced To render services such as repair refuel or removal of the target from orbit the chaser spacecraft should exhibit sophisticated RVD B technology for formation fly and final stage docking berthing operations of the mission Assuming that the terminal capture operations of the target are to be performed by a suitable manipulator system on board chaser this study relies upon proven technology and outlines guidance and control methodologies to achieve rendezvous during proximity phases The entry gate of chaser after phasing can be defined at a distance of about 5 km in V bar direction from the target in its orbit To account for errors in modeling navigation or actuation proximity range operations from the entry gate are decomposed into three different subphases as far range inspection fly around and closer approach From the entry gate and along the path of the chaser two hold points are defined first to initiate an inspection and the second which is close to the safe zone defined around the target to initiate a capture The chaser is assumed to perform a station keeping maneuver at the second hold point until initial conditions for the capture are met Possible scenarios pertaining to the behavior of the target in a circular orbit are considered and guidance schemes for different subphases are presented using a combination of Hill Clohessy Willshire HCW solution elliptical fly around glideslope algorithm etc Relative controllers both for position and attitude of the chaser are also presented A Linear Quadratic LQ controller for relative position and a Proportional Integral Derivative PID controller for relative attitude with angular velocity constraints are chosen to track down the error to achieve rendezvous and attitude synchronization with the non cooperative target A comparative analysis between different guidance trajectories for important parameters such as time fuel usage minimum absolute distance and the maximum radial distance

from the target is presented. Verification of the proposed guidance and control methods is done by applying them to two different case studies: the first study incorporating a stabilized target in Geostationary Earth Orbit (GEO) and the second with a spinning target in Low Earth Orbit (LEO). The methods presented here are general and provide a simulator to the chaser to perform rendezvous analysis with non-cooperative targets. To achieve RVD-B, the study proposes a careful combination of guidance solutions for different phases of proximity operations and for different scenarios of the target encountered by the chaser.
