Joachim Deeg, Hans-Georg Klingemann, Gordon L. Phillips, Gary Van Zant, 2011-06-28 The first edition to A Guide to Bone Marrow Transplantation was published 10 years ago At that time we perceived a need for an introductory text to the area of marrow transplantation a rapidly developing field with few general texts avail able Since then the situation has changed dramatically Several introductory texts therapeutic manuals and comprehensive volumes have been published There is a heightened awareness of the availability utility and potential of bone marrow transplantation and of peripheral blood stem cell transplantation in particular In many cases stem cell transplantation is being practiced by physi cians as a standard therapy For those reasons we weighed carefully the question whether the Guide was still useful or even had a place The feedback we received from physicians in practice or in training including both hematologists and other physicians as well as from nurses physician s assistants nurse practitioners and other personnel in volved in one way or another in hematopoietic stem cell transplantation indicat ed that such a text was still desirable as an introduction that focused on princi ples rather than the latest up to date results **Blood and Marrow Transplantation** Fairview Health Services, 2004 This one of a kind guide helps inform donors transplant recipients and their loved ones of what to expect from Clinical Guide to Transplantation in Lymphoma Bipin N. due time Although several books on marrow transplantation have recently been published their scope and goal have generally been different Hence we have decided to prepare a second edition of the Guide Our aim was to maintain a short concise text which never theless would incorporate changes that have occurred over the past four or five years We have streamlined the description of pretransplant considerations by condensing two sections into one Treatment Planning and Timing of Transplantation This also facilitated the review of controversial indications for marrow transplantation for example in patients with acute myelogenous leukemia in first chemotherapy induced remission. We have updated the chapter dealing with conditioning regimens and have expanded the section on donor selection in particular in regard to the current level of tissue typing and the identification of unrelated volunteer donors In the chapter on collection processing and infusion of marrow we have incorporated recent developments for example the use of closed systems for marrow harvesting and processing and the use of solid phase separation of stem cells **Blood and Marrow Transplantation** ,2004 Guide to Hematology Hillard M.
