Fit For Action:

Action Meets Word Kathy Hirsh-Pasek, Roberta Michnick Golinkoff, 2010-04-29 Although there has been a surge in our understanding of children's vocabulary growth theories of word learning lack a primary focus on verbs and adjectives. Researchers throughout the world recognize how our understanding of language acquisition can be at best partial if we cannot comprehend how verbs are learned. This volume represents a proliferation of research on the frontier of early verb learning enhancing our understanding of the building blocks of language and considering new ways to assess key aspects of language growth.

Divine Holiness and Divine Action Mark C. Murphy, 2021-02-18 Holiness is the attribute most emphatically ascribed to God in Scripture but there has been little attention devoted to characterizing and considering the entailments of divine holiness. In *Divine Holiness and Divine Action* Mark C. Murphy defends an account of holiness indebted to Rudolf Otto's description of the experience of the holy as that of a *mysterium tremendum et fascinans*. God's being holy consists in God's being someone with whom intimate union is both extremely desirable for us and yet something for which we and indeed any limited beings are unfit. This notion of divine holiness is useful for addressing disputed theological questions regarding divine action. In contrast to standard accounts of divine action that begin with assumptions regarding God's moral perfection or God's maximal love, the appeal to divine holiness supports a rival framework for explaining and predicting divine action: the holiness framework according to which God is motivated to act in ways that are a response to God's own value by keeping distance from that which is deficient, defective, or in any way limited in goodness. This study exhibits the fruitfulness of a reorientation from the morality and love frameworks to the holiness framework by showing how such a reorientation suggests distinct approaches to perennial problems of divine action regarding creation, incarnation, atonement, and salvation. From the treatment of these perennial problems a general theme regarding divine action emerges: that God's interaction with the world exhibits a radical sort of humility.

Hume, Passion, and Action Elizabeth Schmidt Radcliffe, 2018 David Hume's theory of action is well known for several provocative theses including that passion and reason cannot be opposed over the direction of action. Elizabeth S. Radcliffe defends an original interpretation of Hume's views on passion, reason, and motivation which is consistent with other theses in Hume's philosophy: loyal to his texts and historically situated. She challenges the now orthodox interpretation of Hume on motivation, presenting an alternative that situates Hume closer to Humeans than many recent interpreters have. Part of the strategy is to examine the thinking of the early modern intellectuals to whom Hume responds. Most of these thinkers insisted that passions lead us to pursue harmful objects unless regulated by reason and most regarded passions as representations of good and evil which can be false. Understanding Hume's response to these claims requires appreciating his respective characterizations of reason and passion. The author argues that Hume's thesis that reason is practically impotent apart from passion is about beliefs generated by reason rather than about the capacity of reason. Furthermore, the argument makes sense of Hume's sometimes ridiculed description of passions.

as original existences having no reference to objects The author also shows how Hume understood morality as intrinsically motivating while holding that moral beliefs are not themselves motives and why he thought of passions as self regulating contrary to the admonitions of the rationalists **Measurement Theory in Action** Kenneth S Shultz,David J.

Between Perception and Action Bence Nanay,2013-11-28 What mediates between sensory input and motor output This is probably the most basic question one can ask about the mind There is stimulation on your retina something happens in your skull and then you hand reaches out to grab the apple in front of you What is it that happens in between What representations make it possible for you to grab this apple Bence Nanay calls these representations that make it possible for you to grab the apple pragmatic representations In Between Perception and Action he argues that pragmatic representations whose function is to mediate between sensory input and motor output play an immensely important role in our mental life And they help us to explain why the vast majority of what goes on in our mind is very similar to the simple mental processes of animals The human mind like the mind of non human animals has been selected for allowing us to perform actions successfully And the vast majority of our actions like the actions of non human animals could not be performed without perceptual guidance And what provides the perceptual guidance for performing actions are pragmatic representations If we accept this framework many classic questions in philosophy of perception and of action will look very different The aim of this book is to trace the various consequences of this way of thinking about the mind in a number of branches of philosophy as well as in psychology and cognitive science

Action D. G. Brown,1968-12-15 Professor Brown in this volume discusses one of the most difficult questions in metaphysics what is action His analysis proceeds along three main lines of thought the point of view of the agent the primacy of inanimate action and the pervasiveness of explanatory insight in the description of action In the spirit of recent work on practical reasoning he takes the central fact about human action to be the existence of the point of view and considers the agent s relation to his own body Professor Brown argues that the concept of human action is best understood through that of inanimate action such as the action of wind on trees or an axe on wood His analysis takes inanimate action as fundamental and defends it against the popular theory that it is an anthropomorphic projection Human action is indeed unique But it is also Professor Brown s thesis that the classical empiricist search for the brute fact of our own agency yields no more than incidental insights into its nature introspection does not replace the analysis of human action The analysis in this essay caters for inanimate action as well as for the uniqueness of human action The key to an analysis complex enough to cover both is the notion of attributability which Professor Brown regards as providing an Aristotelian extension of a Humean approach to causation Explanation by reference to the soul exploits the point of view of the rational agent In this way both human and inanimate action are exhibited as natural phenomena the descriptions of which are pervaded by explanatory insight The book as a whole gives an account of action in which the peculiarities of human action find their place in nature It does not enter on questions of ethics but remains with concepts common to morality psychology and history There are incidental discussions of deliberation

psychokinesis casual necessity the agent s knowledge of his action and responsibility Here is a controversial theory of action supported by careful argument Professor Brown s writing is both ambitious in scope and attentive to conceptual detail and offers a valuable contribution to one of the liveliest contemporary debates in philosophy
