American Military Life in the 21st Century Eugenia L. Weiss,Carl Andrew Castro,2018-11-16 A comprehensive guide to the lives and experiences of military service members veterans and their families in the United States today with special emphasis given to those of the post 9 11 era This reference work provides detailed information on the issues U S service members face both stateside and during deployments overseas Issues covered include relations with family substance use housing educational and job training opportunities post traumatic stress disorder and other health issues and experiences of women sexual minorities and ethnic racial minorities in the armed services This set also examines major issues related to military service for people close to the men and women who serve our country such as spouses or partners children and parents grappling with such issues as single parenthood during deployment and bereavement at the loss of a loved one Finally this set is a valuable resource for people seeking a greater understanding of the issues that confront some military service members and veterans from chronic health problems to economic vulnerability to suicide to incarceration The two volumes are written in a comprehensive yet succinct and accessible style by experts familiar with the latest trends and findings **Life After 60 - A Guide - Part II** Rakesh Mittal,2023-09-24 Senior Citizens enter an uncharted territory at eligible age to be called so Understanding of its various aspects and relevant intricacies would not only enhance preparedness but also give confidence to tackle eventualities It has been attempted to include articles in the book Life After 60 A guide so as to covers all relevant aspects with unfolding of their flow affecting them as a person ages Knowing rules and arena of any game enhances flavour and add to its enjoyment After going through the book the same feeling is going to hit the readers **Geriatric Medicine** Michael R. Wasserman,Debra Bakerjian,Sunny Linnebur,Sharon Brangman,Matteo

Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine **ChatGPT for Everyday Life** Taylor

A Life Course Approach to Healthy Ageing Diana Kuh,Rachel Cooper,Rebecca Hardy,Marcus

Richards,Yoav Ben-Shlomo,2014 This title investigates the lifetime determinants of healthy ageing and their implications for policy and practice bringing together authorities in ageing research and knowledge transfer from across the world

The Revolutionary Origins of Life and Death Pierre M. Durand,2020-12-09 The question of why an individual would actively kill itself has long been an evolutionary mystery Pierre M Durand s ambitious book answers this question through close inspection of life and death in the earliest cellular life As Durand shows us cell death is a fascinating lens through which to examine the interconnectedness in evolutionary terms of life and death It is a truism to note that one does not exist without the other but just how does this play out in evolutionary history These two processes have been studied from philosophical theoretical experimental and genomic angles but no one has yet integrated the information from these various disciplines In this work Durand synthesizes cellular studies of life and death looking at the origin of life and the evolutionary significance of programmed cellular death The exciting and unexpected outcome of Durand s analysis is the realization that life and death exhibit features of coevolution The evolution of more complex cellular life depended on the coadaptation between traits that promote life and those that promote death In an ironic twist it becomes clear that in many circumstances programmed cell death is essential for sustaining life

Individual-based Modeling and Ecology Volker Grimm,Steven F. Railsback,2013-11-28 Individual based models are an exciting and widely used new tool for ecology These computational models allow scientists to explore the mechanisms through which population and ecosystem ecology arises from how individuals interact with each other and their environment This book provides the first in depth treatment of individual based modeling and its use to develop theoretical understanding of how ecological systems work an approach the authors call individual based ecology Grimm and Railsback start with a general primer on modeling how to design models that are as simple as possible while still allowing specific problems to be solved and how to move efficiently through a cycle of pattern oriented model design implementation and analysis Next they address the problems of theory and conceptual framework for individual based ecology What is theory That is how do we develop reusable models of how system dynamics arise from characteristics of individuals What conceptual framework do we use when the classical differential equation framework no longer applies An extensive review illustrates the ecological problems that have been addressed with individual based models The authors then identify how the mechanics of building and using individual based models differ from those of traditional science and provide guidance on formulating programming and analyzing models This book will be helpful to ecologists interested in modeling and to other scientists interested in agent based modeling
