Fitting Frequency Distributions Philosophy Practice:

Fitting Frequency Distributions David W Miller, Miller Ideas, Limited, 2005 There are a great many named theoretical distributions but a large proportion of them have no known justification for their existence There are two main reasons for this First it is very easy to create a new theoretical distribution or family of distributions For many years any such creation was sufficient to achieve an academic publication Second no one ever to our knowledge acted upon the most elementary principles that might afford some justification for a proposed suggestion namely does the new distribution provide a good fit to some observed data that cannot be fitted by the standard better known distributions The result is that periodicals are full of suggested theoretical distributions that in many cases are of breathtaking worthlessness This set of two books attempts to remedy this situation 1 A very large number of theoretical distributions is repeatedly fitted to some 200 observed distributions 2 I do not hesitate to conclude that a distribution is without value in fitting Examples are McKay s Bessel function distributions Fisher s quartic exponential distribution most of Johnson s system a distribution due to Ramberg et al 3 I emphasize some theoretical distributions of major usefulness in fitting which do not seem to be so well known among practitioners Examples are the immensely powerful Kapteyn system the Burr distribution the Evered distribution and the Craig system 4 My goal throughout is to enable any practitioner to be able to recognize the most likely possibilities as theoretical distributions for his or her observed dist and to eliminate the unlikely ones without waste of time **Fitting**

Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories not to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based

Slater,Zanja Yudell,2017-02-01 The question of the proper role of metaphysics in philosophy of science is both significant and contentious The last few decades have seen considerable engagement with philosophical projects aptly described as the metaphysics of science inquiries into natural laws and properties natural kinds causal relations and dispositions At the same time many metaphysicians have begun moving in the direction of more scientifically informed scientific or naturalistic metaphysics And yet many philosophers of science retain a deep suspicion about the significance of metaphysical investigations into science This volume of new essays explores a broadly methodological question what role should metaphysics play in our philosophizing about science These new essays written by leading philosophers of science address this question both through ground level investigations of particular issues in the metaphysics of science and by more general methodological inquiry
