Flame - Retardant Polymeric Materials Menachem Lewin, S. M. Atlas, Eli M. Pearce, 2012-12-06

Flammability has been recognized as an increasingly important social and scientific problem. Fire statistics in the United States Report on the National Commission on Fire Prevention and Control America Burning 1973 emphasized the vast devastation to life and property: 12 000 lives lost annually due to fire and these deaths are usually caused by inhaling smoke or toxic gases; 300 000 fire injuries; 11.4 billion dollars in fire cost of which 2.7 billion dollars is related to property loss, a billion dollars to burn injury treatment and 3.3 billion dollars in productivity loss. It is obvious that much human and economic misery can be attributed to fire situations. In relation to this polymer flammability has been recognized as an increasingly important social and scientific problem. The development of flame retardant polymeric materials is a current example where the initiative for major scientific and technological developments is motivated by sociological pressure and legislation. This is part of the important trend toward a safer environment and sets a pattern for future example. Flame retardancy deals with our basic everyday life situations: housing, work areas, transportation, clothing, and so forth, the macroenvironment capsule within which humans live. As a result, flame retardant polymers are now emerging as a specific class of materials leading to new and diversified scientific and technological ventures.

Fire Retardancy of Polymeric Materials, Second Edition Charles A. Wilkie, Alexander B. Morgan, 2009-12-10

When dealing with challenges such as providing fire protection while considering cost, mechanical and thermal performance and simultaneously addressing increasing regulations that deal with composition of matter and life cycle issues, there are no quick one size fits all answers. Packed with comprehensive coverage, scientific approach, step by step directions and a distillation of technical knowledge, the first edition of *Fire Retardancy of Polymeric Materials* broke new ground. It supplied a one stop resource for the development of new fire safe materials. The editors have expanded the second edition to echo the multidisciplinary approach inherent in current flame retardancy technology and put it in a revised, more user friendly format. More than just an update of previously covered topics, this edition discusses additional fire retardant chemistry developments in regulations and standards, new flame retardant approaches, fire safety engineering, modeling and fire growth phenomena. The book introduces flame retardants polymer by polymer, supplemented by a brief overview of mode of action and interaction and all the other ancillary issues involved in this applied field of materials science. The book delineates what, why and how to do it, covering the fundamentals of polymer burning, combustion and how to apply these systems and chemistries to specific materials classes. It also provides suggested formulations, discusses why certain materials are preferred for particular uses or applications and offers a starting point from which to develop fire safe materials.

Principles of Textile Finishing presents the latest information on textile finishing for industry professionals and researchers who are new to the field. As these processes are versatile and varied in their applications, the book provides information on how decisions on finishes and techniques may be made subjectively or based on experience. In addition, the book presents the desired final properties of textile materials and how they differ widely from product to product, helping finishers who face significant challenges in delivering fabrics that meet the requirements of end users to be successful. Written by an author who is an expert in the field and who has with many years of experience in industry and academia, this book provides an accessible introduction to the principles, types, and applications of textile finishes. Provides an accessible introduction to the principles, types, and applications of textile finishes. Assists industry professionals and researchers in selecting finishes that will result in fabric properties that meet the requirements of end users. Interior Textiles T Rowe, 2009-09-25 This book provides an overview of the types of textiles used within the interior textile sector and key technological developments and safety issues affecting the industry. An understanding of these topics enables the designer or manufacturer to select the most appropriate fabrics for interior applications. The first group of chapters reviews types and selection of materials for interior textiles, including natural and synthetic fibres, as well as knitted, woven, and nonwoven fabrics. Further chapters review surface design of interior textiles and the use of textiles in carpets and floor coverings. The second part of the book discusses developments in such areas as joining furniture fabrics, the use of sustainable and recycled textiles in interior applications, using interior textiles to minimise indoor environmental pollution, flame retardant materials, and innovative textiles for seating. Interior textiles design and developments is an important text for manufacturers, designers, and buyers of interior textiles, as well as being a valuable resource for students and academics studying interior design and materials.
