Flash Flood Forecasting Over Complex Terrain:

Flash Flood Forecasting Over Complex Terrain National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee to Assess NEXRAD Flash Flood Forecasting Capabilities at Sulphur Mountain, California, 2005-01-28 The nation's network of more than 130 Next Generation Radars NEXRADs is used to detect wind and precipitation to help National Weather Service forecasters monitor and predict flash floods and other storms This book assesses the performance of the Sulphur Mountain NEXRAD in Southern California which has been scrutinized for its ability to detect precipitation in the atmosphere below 6000 feet The book finds that the Sulphur Mountain NEXRAD provides crucial coverage of the lower atmosphere and is appropriately situated to assist the Los Angeles Oxnard National Weather Service Forecast Office in successfully forecasting and warning of flash floods The book concludes that in general NEXRAD technology is effective in mountainous terrain but can be improved

Flash Floods Kevin Sene, 2012-12-14 Flash floods typically develop in a period a few hours or less and can arise from heavy rainfall and other causes such as dam or flood defence breaches and ice jam breaks The rapid development often associated with a high debris content can present a considerable risk to people and property This book describes recent developments in techniques for monitoring and forecasting the development of flash floods and providing flood warnings Topics which are discussed include rainfall and river monitoring nowcasting Numerical Weather Prediction rainfall runoff modelling and approaches to the dissemination of flood warnings and provision of an emergency response The book is potentially useful on civil engineering water resources meteorology and hydrology courses and for post graduate studies but is primarily intended as a review of the topic for a wider audience

Federal Register, 1999-06-09 Mountain Weather Research and Forecasting Fotini K. Chow, Stephan F.J. De Wekker, Bradley J. Snyder, 2012-08-30 This book provides readers with a broad understanding of the fundamental principles driving atmospheric flow over complex terrain and provides historical context for recent developments and future direction for researchers and forecasters The topics in this book are expanded from those presented at the Mountain Weather Workshop which took place in Whistler British Columbia Canada August 5-8 2008 The inspiration for the workshop came from the American Meteorological Society AMS Mountain Meteorology Committee and was designed to bridge the gap between the research and forecasting communities by providing a forum for extended discussion and joint education For academic researchers this book provides some insight into issues important to the forecasting community For the forecasting community this book provides training on fundamentals of atmospheric processes over mountainous regions which are notoriously difficult to predict The book also helps to provide a better understanding of current research and forecast challenges including the latest contributions and advancements to the field The book begins with an overview of mountain weather and forecasting challenges specific to complex terrain followed by chapters that focus on diurnal mountain valley flows that develop under calm conditions and dynamically driven winds under strong forcing The focus then shifts to other

phenomena specific to mountain regions Alpine foehn boundary layer and air quality issues orographic precipitation processes and microphysics parameterizations Having covered the major physical processes the book shifts to observation and modelling techniques used in mountain regions including model configuration and parameterizations such as turbulence and model applications in operational forecasting The book concludes with a discussion of the current state of research and forecasting in complex terrain including a vision of how to bridge the gap in the future

When Weather Matters National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Progress and Priorities of U.S. Weather Research and Research-to-Operations Activities, 2010-12-09 The past 15 years have seen marked progress in observing understanding and predicting weather At the same time the United States has failed to match or surpass progress in operational numerical weather prediction achieved by other nations and failed to realize its prediction potential as a result the nation is not mitigating weather impacts to the extent possible This book represents a sense of the weather community as guided by the discussions of a Board on Atmospheric Sciences and Climate community workshop held in summer 2009 The book puts forth the committee's judgment on the most pressing high level weather focused research challenges and research to operations needs and makes corresponding recommendations The book addresses issues including observations global non hydrostatic coupled modeling data assimilation probabilistic forecasting and quantitative precipitation and hydrologic forecasting The book also identifies three important emerging issues predictions of very high impact weather urban meteorology and renewable energy development not recognized or emphasized in previous studies Cutting across all of these challenges is a set of socioeconomic issues whose importance and emphasis while increasing has been undervalued and underemphasized in the past and warrants greater recognition and priority today
