Proceedings of the Third Symposium on Thin Film Transistor Technologies Yue Kuo,1997 **Flat Panel Display Materials** ,1997 *Flat Panel Display Materials III: Volume 471* Ron Fulks,1997-09-10 Flat panel displays are rapidly becoming the displays of choice for a variety of information displaying applications ranging from laptop computers to automobile and cockpit read out devices Passive matrix liquid crystal displays and more recently active matrix liquid crystal displays AMLCDs have led the way in the display revolution In addition emissive displays based on field emission electroluminescence and plasma charge are attracting considerable interest Ultimately however the advancement in flat panel display applications will be driven by cost and performance advantages which are dependent on the advancement of materials and process technologies used to fabricate the displays This book focuses on the materials and large area processes used by the various display technologies both emissive and nonemissive including liquid crystal electroluminescent plasma field emission and micromechanical displays Topics include AMLCD materials and processes thin film transistors for AMLCDs emissive displays and materials and phosphor materials **Flat Panel Displays in Perspective** ,1995 Rapid Thermal and Integrated Processing III: Volume 342 Jimmie J. Wortman,1994-08-02 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Dynamics in Small Confining Systems: Volume 366 J. M. Drake,1995-06-02 Interfacial science has rapidly expanded beyond the original realm of chemistry to include physics mechanical and chemical engineering biology materials science and other specialized sub fields All of these scientific disciplines come together in this book to share viewpoints and bridge gaps among the different approaches and methods presented Discussions focus on how ultrasmall geometries can force a system to behave in ways significantly different than it behaves in bulk how this difference affects molecular properties and how it is probed Topics include probing confined systems structure and dynamics of thin films nanorheology diffusion in porous systems adsorption and phase transitions and reaction dynamics **Structure and Properties of Interfaces in Ceramics: Volume 357** Dawn A. Bonnell,Manfred Rühle,Uma Chowdhry,1995-07-03 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners *Dynamics in Small Confining Systems* ,1997 **Intermetallic Matrix Composites III: Volume 350** J. A. Graves,R. R. Bowman,J. J. Lewandowski,1994-09 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners **Science and Technology of Fullerene Materials: Volume 359** Patrick Bernier,1995-04-05 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners *Scintillator and Phosphor Materials: Volume 348* Marvin J. Weber,1994-11-25 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Molecularly Designed Ultrafine/nanostructured Materials Kenneth E. Gonsalves,1994 Forthcoming Books Rose Arny,1997 **Ceramic Matrix Composites: Volume 365** Richard A.

Lowden,1995-08-10 Materials that possess low weight high temperature strength and stability in corrosive environments are required for many advanced applications Among competing materials ceramic matrix composites CMCs are the leading candidates As with all composite systems ceramic composites are composed of two or more constituents that must maintain identity and properties in the final structure In fact it is the combination of constituent properties that produces the desired mechanical response in these advanced structural materials This book from MRS focuses on ceramic matrix composites and offers an interdisciplinary perspective on the many unique challenges in design processing characterization and testing that they present Topics include reinforcements and matrices matrix materials and processing composite processing and properties testing and design modeling of interfacial behavior interface test methodologies chemical vapor infiltration experimental verification of interface behavior modification and control of interface properties and environmental effects

Materials for Smart Systems: Volume 360 Easo P. George,1995-03-28 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners **Thin Films** Materials Research Society,1995 *Electronic Packaging Materials Science IX: Volume 445* Steven K. Groothuis,1997-10-20 While this book continues the spirit of the MRS series on materials science related to the development of electronic packaging it also focuses on three very specific technological areas technology for flip chip packaging materials metrology and characterization and packaging reliability and testing These are important areas for technology development in electronic packaging particularly since materials and processing play an important role in controlling system performance and reliability Topics include flip chip and solder technology future packaging technology manufacturing technology in packaging packaging materials and metrology interfacial adhesion and fracture and packaging reliability and testing **Electronic Packaging Materials Science** ,1996 *Low-Dielectric Constant Materials II: Volume 443* André Lagendijk,1997-08-19 Low dielectric constant materials are needed to improve the performance and speed of future integrated circuits In fact the diversity of contributors to this book is testimony to the global significance of the topic to the future of semiconductor manufacturing Presentations include those by semiconductor equipment manufacturers and chemical source suppliers academia from six countries four government laboratories and five major device manufacturers Approaches to designing and implementing reduction in dielectric constant for intermetal dielectric materials are featured and range from the evolution of silicon dioxide to fluorinated silicate glass to the use of inorganic organic polymers and spin on material to fluorinated diamond like carbon and nanoporous silica The book also addresses the practical aspects of the use of low dielectric constant materials such as chemical mechanical polishing of these materials and optimization of wiring delays in devices utilizing low k material

Defects in Electronic Materials II: Volume 442 Jürgen Michel,1997-05-02 The pervasive role of defects in determining the thermal mechanical electrical optical and magnetic properties of materials is significant as is the knowledge and operation of generation and control of defects in electronic materials Developing novel semiconductor materials however

requires new insights into the role of defects to achieve new properties New experimental techniques must be developed to study defects in small structures Research groups come together in this book from MRS to provide a vivid picture of the current problems progress and methods in defect studies in electronic materials Topics include new techniques in defect studies processing induced defects plasma induced point defects processing induced defects defects and gate oxide integrity point defects and reaction point defects and interactions in Si impurity diffusion and hydrogen in Si dislocations in group IV semiconductors point defects and defect interactions in SiGe point defects in III V compounds compensation and structural defects in III V compounds and layers and structures
