Fire,1991 Although many people may want to know how plastics bum the question of how plastics bum is only a part of a much larger question How does anything bum To examine the burning process of plastics in isolation does not make any sense and may lend credence to the idea that plastics are a special material with a special hazard An analogy would be to study how carbonless carbon paper bums and then to relate the burning characteristics and combustion products of this single type of paper to all other types of paper and even to other wood products and to wood itself The testing of one type of product from a very large family of products that are physically similar and the relation of these test results to all other members of that family has no basis in the scientific method Those who do so are ignorant of science unless they have some hidden reason for wanting to ascribe certain properties to all related materials *Encyclopedia of PVC, Second Edition* Leonard I. Nass,1992-08-28 Revised and updated throughout this second edition

covers significant changes and advances in PVC science and technology Volume 3 examines such diverse subjects as PVC compounding equipment compounding process control solid and liquid compound process development compound and product specifications test methods with an interpretation of test results environmental and occupational safety and melt processing Providing over 700 literature references volume 3 is intended for polymer plastics physical organic surface and colloid chemists plastics chemical materials mechanical and manufacturing engineers and technical personnel and graduate and postgraduate students in these disciplines

Fire Toxicity A A Stec, T R Hull, 2010-03-12 Toxic fire effluents are responsible for the majority of fire deaths and an increasing large majority of fire injuries driven by the widespread and increasing use of synthetic polymers Fire safety has focused on preventing ignition and reducing flame spread through reducing the rate of heat release while neglecting the important issue of fire toxicity This is the first reference work on fire toxicity and the only scientific publication on the subject in the last 15 years Assessment of toxic effects of fires is increasingly being recognised as a key factor in the assessment of fire hazards This book raises important issues including the types of toxic effluents that different fires produce their physiological effects methods for generation and assessment of fire toxicity current and proposed regulations and approaches to modelling the toxic impact of fires The contributors to Fire toxicity represent an international team of the leading experts in each aspect of this challenging and important field This book provides an important reference work for professionals in the fire community including fire fighters fire investigators regulators fire safety engineers and formulators of fire safe materials It will also prove invaluable to researchers in academia and industry Investigates the controversial subject of toxic effluents as the cause of the majority of fire deaths and injuries Describes the different types of toxic effluents and the specific fires that they produce their physiological effects and methods for generation Provides an overview of national and international fire safety regulations including current and proposed regulations such as a standardized framework for prediction of fire gas toxicity
