Mahmoud Taghavi¹, Mostafa Darvishiyan², Maryam Momeni², Hadi Eslami³, Reza Ali Fallahzadeh⁴ & Ahmad Zarei^{1,5,6}

Contamination of farmland soils by trace elements (TEs) has become an international issue concerning food safety and human health risks. In the present research, the concentrations of TEs including cadmium (Cd), cobalt (Co), chromium (Cr), copper (Cu), manganese (Mn), nickel (Ni), lead (Pb), zinc (Zn) and iron (Fe) in soils of 16 farmlands were determined in Gonabad, Iran. In addition, the human health risks due to exposure to the TEs from the soils were assessed. Moreover, the soil contamination likelihood was evaluated based on various contamination indices including contamination factor (CF), enrichment factor (EF), geo-accumulation index (I_{geo}), and pollution load index (PLI) calculations. The soil mean concentrations for Cd, Co, Cr, Cu, Mn, Ni, Pb, Zn and Fe ranges as 0.102, 6.968, 22.550, 29.263, 475.281, 34.234, 13.617, 54.482 and 19,683.6 mg/kg in farmland soils. The mean concentrations of the TEs decreased in the order of Fe > Mn > Zn > Ni > Cu > Cr > Pb > Co > As > Cd. Levels of all metals in this study were within the FAO/WHO and Iranian soil standards. The HQ values from investigated elements for adults and children in the studied farms were less than the limit of 1, indicating no health risks for the studied subpopulations. The results of the present research indicated no significant carcinogenic health hazards for both adults and children through ingestion, skin contact and inhalation exposure routes. CF values of Ni and Zn in 100% and 6.25% of farmlands were above 1, showing moderate contamination conditions. EF values of metals in farmlands were recorded as “no enrichment”, “minimal enrichment” and “moderate enrichment” classes. Furthermore, it can be concluded that the all farms were uncontaminated except Ni (moderately contaminated) based on I_{geo}. This is an indication that the selected TEs in the agricultural soils have no appreciable threat to human health.

Issues arise from the rapid process of urbanization, industrialization and land use has attracted worldwide public attention from both environmental and health perspectives^{1,2}. Soil is the skin of our globe and is necessary for living organisms as it provides elements and nutrients for plants growth and serves as habitat for microflora and fauna³. The growing population in world significantly increase pressure on the farmlands. In order to improve the yield and profit of agricultural products, the excessive cultivation has inevitably resulted in the contamination of the soils by TEs. Farming is considered to be one of the main sources of As, Cu, Zn, Fe and Pb in the soils^{4–7}. Among toxic and persistent pollutants found in agricultural soils, a special attention is paid on heavy metals. Heavy metals (including both metals and metalloids) are the most widely distributed elements of concern in

Soil and Groundwater Pollution Alexander J.B. Zehnder, 1995-11-30 SCOPE the Scientific Committee on Problems of the Environment was established by the International Council of Scientific Unions ICSU in 1969 as an international non to governmental non profit organisation with the mandate advance knowledge of the influence of humans on their environment as well as the effects of these environmental changes upon people their health and their welfare with particular attention to those influences and effects which are either global or shared by several nations to serve as a non governmental interdisciplinary and international council of scien tists and as a source of advice for the benefit of

governments and intergovernmental and non governmental bodies with respect to environmental problems SCOPE has been established because critical environmental concerns call for a thorough evaluation of the issues at stake an assessment of their consequences at global and regional levels and the formulation of possible solutions Through its activities SCOPE identifies available knowledge then synthesizing it to point out where gaps and uncertainties exist and to recommend where efforts should be concentrated to develop explanations and solutions
