Economics and Policies in Formulating Renewable Power Development

Plans Bai-Chen Xie, Karim Anaya Stucchi, Hong-zhou Li, 2023-11-06 Renewable energy has been considered as an effective way to deal with challenges caused by energy security and climate change. In the past decades the share of renewable energy in the energy mix has been increasing with a proportion of around 25% globally benefitting from the steady maturity of economical technological and political issues. However the gap between expectations of fast renewables driven energy transitions and the reality of today's energy systems which rely heavily on fossil fuels remains stubbornly large. The development of renewable energy still faces uncertainties among them are cost changes driven by the potential technology breakthroughs renewable power market oriented progress and various challenges related to grid interconnection of such intermittent renewable energy resources and some other factors. Many countries and regions have issued their plans in boosting the development of renewable power. However not one renewable power exploitation plan is acceptable universally due to the varied developing level of economies and societies. It is of great significance to explore the economic technological and political influences of related factors in achieving the development target for renewable energy.

Emerging

Principles of International Environmental Law

Sumudu Atapattu, 2007-04-30

Emerging Principles of International Environmental Law is ideally suited for any law or environmental studies student practitioner or law academic who is interested in the legal status of emerging principles in the field of international environmental law. Among its highlights the text examines the interaction of principles concepts such as sustainable development the precautionary principle etc with one another and how the present international environmental law regime has taken the vast disparity between developed and developing countries into account in designing innovative methods to accommodate this disparity. Following an introductory chapter on the development of international environmental law the book explores five concepts principles that have emerged in the recent years in this field and discusses their relationship to one another particularly how they interact and contribute to the achievement of sustainable development. The precautionary principle the environmental impact assessment process and participatory rights the common but differentiated responsibility principle and the polluter pays principle. The final chapter evaluates the emergence of a distinct field of international law called International Sustainable Development Law and discusses its future direction. While these principles or concepts have received much attention in previous literature not much attention has been paid to their interaction with one another and how the present international environmental law regime has taken the vast disparity between developed and developing countries into account in designing innovative methods to accommodate this disparity. It is here the strength of the book lies. The book was written to provide a firm grasp of international environmental law issues and of international law in general. It is intended for the international market for anybody who is interested in the future direction of international environmental law and of sustainable development.
