For Good Measure Joseph E. Stiglitz, 2019-11-19 Today's leading economists weigh in with a new dashboard of metrics for measuring our economic and social health What we measure affects what we do If we focus only on material well being on say the production of goods rather than on health education and the environment we become distorted in the same way that these measures are distorted Joseph E Stiglitz A consensus has emerged among key experts that our conventional economic measures are out of sync with how most people live their lives GDP they argue is a poor and outmoded measure of our well being The global movement to move beyond GDP has attracted some of the world's leading economists statisticians and social thinkers who have worked collectively to articulate new approaches to measuring economic well being and social progress In the decade since the 2008 economic crisis these experts have come together to determine what indicators can actually tell us about people's lives In the first book of its kind leading economists from around the world including Thomas Piketty Emmanuel Saez Elizabeth Beasley Jacob Hacker Francois Bourguignon Nora Lustig Alan B Krueger and Joseph E Stiglitz describe a range of fascinating metrics from economic insecurity and environmental sustainability to inequality of opportunity and levels of trust and resilience that can be used to supplement the simplistic measure of gross domestic product providing a far more nuanced and accurate account of societal health and well being This groundbreaking volume is

sure to provide a major source of ideas and inspiration for one of the most important intellectual movements of our time

International Financial Management Arthur I. Stonehill, Michael H. Moffett, 1993

Risk-Taking and Optimal Taxation with Nontradable Human Capital Zulu Hu, 1992-12-01 What are the effects of taxation on individual entrepreneurs risk taking behavior This paper re examines this old question in a continuous time life cycle model We demonstrate that the stream of uncertain income from human capital has systematic effects on demand for the risky physical capital asset If labor supply is inelastic and real wages are known with certainty then a labor income tax will reduce holdings of the risky physical asset However if there are random fluctuations in labor income then the effect depends on the nature of interaction between wage risk and investment income risk A labor income tax may actually raise demand for the risky capital asset if human capital risk and physical capital risk are positively correlated The idiosyncratic risk and nontradability of human capital also have implications for optimal taxation When the insurance and

disincentive effects are jointly taken into account a Pareto efficient tax structure implies a strictly positive tax rate

Economic Incentives for Land Use Control Frederick H. Rueter, Phillip Kushner, 1977 The Representative Agent in Macroeconomics James E Hartley, James E. Hartley, 2002-01-04 Representative agent models have become a predominant means of studying the macroeconomy in modern economics without there being much discussion in the literature about their propriety or usefulness This volume evaluates the use of these models in macroeconomics examining the justifications for their use and concluding that representative agent models are neither a proper nor a particularly useful means of studying aggregate behaviour

Arestis, 1997-03-05 This book reviews the paradigm which has come to be known as post Keynesian economics concentrating on the main issues that form the heart of this paradigm money and finance conflict in wage and price settings the degree of monopoly and pricing in an open economy divergence rather than convergence in the European Union financial and economic development economic policy and methodological issues

Islamic Microeconomics Lukman Hanif Arbi, M. Ishaq Bhatti, 2023-11-01 This book bridges the gap between Islamic and conventional micro economics by demonstrating how modern tools and theories of microeconomics can be applied to Islamic assumptions regarding economics and finance In contrast to the tendency for Islamic economics and finance proponents to use qualitative and normative approaches based on idealistic assumptions this book demonstrates how one can instead construct analytical models of Islamic economics and finance and simply compare the implications with those predominant in today's world This book also offers extensive literature reviews demonstrating that for a long time the gap between Islamic and conventional economics and finance is not as wide as previously thought allowing those with an interest in both fields to participate more effectively and meaningfully in the ongoing discourse between the two fields The authors conceptualize a general approach and apply it to basic consumer theory More advanced microeconomic ideas are then discussed culminating in demonstrations of how contract theory can facilitate a deeper analysis and appreciation of Islamic financial securities A wide spectrum of academic literature on both Islamic and conventional economics and finance is drawn upon to facilitate a better appreciation for both fields and to inspire future works comparing the two in a more objective manner

Social Choice Re-examined Kotaro Suzumura, 1997-10-13 Since World War II the subject of social choice has grown in many and surprising ways The impossibility theorems have suggested many directions mathematical characterisations of voting structures satisfying various sets of conditions the consequences of restricting choice to certain domains the relation to competitive equilibrium and the core and trade offs among the partial satisfactions of some conditions The links with classical and modern theories of justice and in particular the competing ideas of rights and utilitarianism have shown the power of formal social choice analysis in illuminating the most basic philosophical arguments about the good social life Finally the ideals of the just society meet with the play of self interest social choice mechanisms can lend themselves to manipulation and the analysis of conditions under which given ideals can be realised
