C. Bose, 2022-05-10 Economics is the strangest and most dubious as also frustrating animal of social sciences and humanities The debate on what it is and what its strengths and weaknesses are in understanding and changing the economy and society for the better is never ending This book cuts through this noise for econ undergrads with social concerns It is crafted to be stuffed with peripatetic hops skips and intellectual and emotional jumps about the nature and character of the brain circuits of economics in terms of its methodological political sociological anthropological historical feminist ethical ecological spiritual literary technical corporate and other underpinnings Diverse stories are told as alerts or nudges for the undergrads who as aspirant youth have in general hyperbolic discounting attitude towards social change The mind and heart of the undergrad reading this book will hopefully be ignited so as to endeavour to find out the purpose of economic education and how economics should be learnt in order to rectify the failures of our current socio economic system The seriously academic undergrad may also be inspired to pursue the long range objective of doing integrated studies and research for maximised understanding and holistic policy making which is of course easier to say than do **The Economics of Waste and Pollution Management in Japan** Fumikazu Yoshida, 2013-03-09 On the threshold of the twenty first century the ordinary Japanese citizen has become acutely aware that various environmental hazards pose a serious threat to daily life such hazards include the problems of waste disposal dioxin and other substances that disturb humans endocrine balance Who a mere decade ago when these problems were first brought to our attention would have anticipated that these environmental problems would so quickly become so common and so serious At the same time environmental problems on a global scale such as ozone depreciation by chlorofluorocarbons CFCs global warming and climate change have become topics of everyday conversation The main objective of this book is to take in these environmental problems focus ing on the two locally important and interrelated issues of waste and pollution This will enable us to investigate the whole range of problems from regionally based pol lution caused by waste disposal and dioxin to the transboundary warming brought about by CO and CFCs We shall thus be able to analyze comprehensively the whole 2 extent of waste and pollution problems ranging from those caused by real garbage and domestic waste to the many kinds of technologically generated waste that result from the production circulation and consumption of industrial goods and services
