Economics For Decision Making:

Economic Decision Making Sisay Asefa, 1985 Managerial Economics for Decision Making John Adams, Linda Juleff, 2017-09-16 Managerial Economics for Decision Making is designed for MBA and final year undergraduates taking a module in Managerial Economics The text is written in a lively and engaging style with the use of mathematics kept to a minimum Ample examples and case studies demonstrate how economics can be used as a tool to tackle issues and problems in a business and management context Managerial Economics Floyd E. Gillis, 1969 *Managerial Economics* Milton H. Spencer, Louis Siegelman, 1964 *Economic Decision Making Using Cost Data* Daniel Marburger, 2013-08-01 A firm maximizes profits if each decision adds more to the firm's revenue than to its costs Although the concept sounds rather simple it is difficult to do in practice To ease this difficulty the authors are giving you the inside knowledge to economic theory This book will help you understand economic theory and much more to accurately infer changes in revenues that may be associated with a decision And since economic theory suggests that the costs reported by accountants rarely reflect the true cost associated with the decision this book will help you understand how to assess the changes in revenues and costs Demand and price sensitivity analysis allow you to infer revenue changes and this book helps you reconcile the economic theory of cost with common accounting practices so the differences can be reconciled and better decisions can be made

The Psychology of Economic Decisions Isabelle Brocas, Juan D. Carrillo, 2003 Psychologists have a long tradition of studying human behavior strengths and weaknesses biases and limitations Economists have constructed normative frameworks that capture the most important elements of human decision making and developed powerful tools to determine individual and strategic choices in a variety of situations Only recently have their strengths been combined and economic models enriched with key ingredients found in psychological studies This volume covers four of the most important themes in this interdisciplinary field feelings inconsistencies limitations and biases Each chapter contributes to a more comprehensive and accurate modelling and description of human behavior Its four parts cover the origins formation and evolution of beliefs consistency commitment and intertemporal separability of dynamic choices attention preference formation and risk evaluation in limited cognition and affective behaviour specifically the role of emotions in decision making Behavioral and neuroscientific analysis of economic decision making in animals Tobias Kalenscher, Marijn Van Wingerden, The experimental analysis of animal behavior has a rich tradition in psychology behavioral ecology and many other scientific branches dedicated to the study of decision making However it has never enjoyed a similar popularity in economics This has recently changed with the dawn of neuroeconomics a discipline combining the analytic and experimental tools of psychology and economics with the technologies available in neuroscience to unravel the neurobiological mechanisms underlying economic behavior Since many of the sophisticated neuroscientific techniques can only be used on animals neuroeconomists have come up with a large and ever growing repertoire of animal models to probe economic decision making Besides the value of using

animals as model systems to emulate human economic behavior the discipline of animal economic decision making exists in its very own right an abundance of animal species at various evolutionary stages show behavior that complies with many of the predictions of economic theory whilst at the same time demonstrating violations of optimal choice models that are reminiscent of similar anomalies found in human behavior Hence the analysis of animal choice does not only offer insights into the evolutionary origins of economic decision making it also testifies that the analysis of animal behavior is a convenient economical and sound way to test competing economic decision models in optimally controlled experimental environments to probe their neural implementation and to yield common denominators in choice behavior In short economic theory provides more than just an alternative language to describe animal psychology its combination with biology psychology and neuroscience gives way to synergy effects that open up new venues for studying economic choice In this special issue we would like to gather the latest results from this cross disciplinary topic address the overlap and discrepancies in the neurobiology of economic decision making found between species and identify the challenges that lie ahead in translating results from species to species and ultimately to humans The exclusive focus on non human animals makes this Research Topic unique and distinct from previous special issues which covered a broader range of matters and subjects in the neurobiological analysis of decision making

Ibáñez, Nikolaos Georgantzis, 2017-08-22 Psychologists studying cognitive processes and personality have increasingly benefited from the wealth of theory methodology and decision making paradigms used in economics and game theory Similarly for the economists personality traits and basic cognitive processes offer a set of coherent explanatory constructs in economic behavior Given the debate on preference invariance and behavioral consistency across contexts and domains the papers in this topic shed light on the existence and effect of stable sets of idiosyncratic features on economic decision making While the effects of personality and cognition on economic decisions remain under explored the papers contributed in this topic offer more than a stimulus for further research The general message could be that personality and cognitive processes offer the stable idiosyncratic ground on which individual decisions are made Economic Decision-Making in a Changing World G.A. Collenteur, C.J. Jepma, 1993-06-18 This volume contains 24 of the contributions made to the conference on Economic Decision making in a Changing World held in 1988 Within the general framework of reference the editors focus on six major issues and feature articles on each as separate subject areas *Selling to the Top* David A. This internationally known author, speaker and sales trainer has already trained over 8,000 IBM salespeople in his highly successful sales program. He gives you proven strategies for getting your foot in the top executive's door, building a relationship and making the sale. In *Selling to the Top*, he tells you how to quickly identify the decision makers, how to figure out who is the Dominant Influencer (DI), how to meet Mr. Ms. Big, it's much easier than you think, how to size up Mr. Ms. Big before you've met, how to develop a detailed plan for calling on executives and how to talk their language by knowing their goals. Everything you'll need to know about the art of persuasion including how to win three things that are necessary to persuade another person: how to build trust and the five most powerful buying motives, how to differentiate yourself from your competitor.

Neuroscience and the Economics of Decision Making Alessandro Innocenti, Angela Sirigu, 2012 In the last two decades there has been a flourishing research carried out jointly by economists, psychologists and neuroscientists. This meltdown of competences has led towards original approaches to investigate the mental and cognitive mechanisms involved in the way the economic agent collects processes and uses information to make choices. This research field involves a new kind of scientist trained in different disciplines familiar in managing experimental data and with the mathematical foundations of decision making. The ultimate goal of this research is to open the black box to understand the behavioural and neural processes through which humans set preferences and translate these behaviours into optimal choices. This volume intends to bring forward new results and fresh insights into this matter.

Fuzzy Investment Decision Making with Examples Cengiz Kahraman, Elif Haktanır, 2024-03-20 This book is a practical and theoretical guide that demonstrates how to leverage investment data in numerical models despite uncertainty and ambiguity. The author presents innovative methods that incorporate fuzzy set theory to overcome the imprecision of expert opinions and appraisals. Through real industry case studies and comparative analyses, the book provides a comprehensive understanding of how these novel approaches can be implemented to measure robustness. This book is a must-read for managers involved in investment decision making for economists, lecturers as well as M.Sc. and Ph.D. students studying investment decision making.

Multiple Criteria Decision Making and its Applications to Economic Problems Enrique Ballester, Carlos Romero, 2013-03-14 Multiple Criteria Decision Making and its Applications to Economic Problems ties Multiple Criteria Decision Making (MCDM), Multiple Objective Optimization (MO) and economics together. It describes how MCDM methods, goal programming, can be used in economics. The volume consists of two parts. Part One of the book introduces the MCDM approaches. This first part comprising Chapters 1-5 is basically an overview of MCDM methods that can most likely be used to address a wide range of economic problems. Readers looking for an in-depth discussion of multi-criteria analysis can grasp and become acquainted with the initial MCDM tools, language and definitions. Part Two, which comprises Chapters 6-8, focuses on the theoretical core of the book. Thus, in Chapter 6, an economic meaning is given to

several key concepts on MCDM such as ideal point distance function etc It illustrates how Compromise Programming CP can support the standard premise of utility optimisation in economics as well as how it is capable of approximating the standard utility optimum when the decision makers preferences are incompletely specified Chapter 7 deals entirely with production analysis The main characteristic throughout the Chapter refers to a standard joint production scenario analysed from the point of view of MCDM schemes Chapter 8 focuses on the utility specification problem in the n arguments space within a risk aversion context A link between Arrows risk aversion coefficient and CP utility permits this task The book is intended for postgraduate students and researchers in economics with an OR MS orientation or in OR MS with an economic orientation In short it attempts to fruitfully link economics and MCDM
