Global environmental change often seems to be the most carefully examined issue of our time Yet understanding the human side human causes of and responses to environmental change has not yet received sustained attention Global Environmental Change offers a strategy for combining the efforts of natural and social scientists to better understand how our actions influence global change and how global change influences us The volume is accessible to the nonscientist and provides a wide range of examples and case studies It explores how the attitudes and actions of individuals governments and organizations intertwine to leave their mark on the health of the planet The book focuses on establishing a framework for this new field of study identifying problems that must be overcome if we are to deepen our understanding of the human dimensions of global change presenting conclusions and recommendations

**Economic Growth and Environmental Sustainability** Paul Ekins, 2002-01-04 A key area of public policy in the last twenty years is the question of how and how much to protect the environment At the heart of this has been the heated debate over the nature of the relationship between economic growth and environmental sustainability Is environmental sustainability economic growth or green growth a contradiction in terms Avoiding the confusion that often surrounds these issues Ekins provides rigorous expositions of the concept of sustainability integrated environmental and economic accounting the Environmental Kuznets Curve the economics of climate change and environmental taxation Individual chapters are organised as self contained state of the art expositions of the core issues of environmental economics with extensive cross referencing from one chapter to another in order to guide the student or policy maker through these complex problems Paul Ekins breaks new ground in defining the conditions of compatibility between economic growth and environmental sustainability and provides measures and criteria by which the environmental sustainability of economic growth as it occurs in the real world may be judged It is argued that green growth is not only theoretically possible but economically achievable and the authors show what environmental and economic policies are required to achieve this Economic Growth and Environmental Sustainability will be welcomed by students of and researchers in environmental economics and environmental studies as well as all interested policy makers

**International population policy issues and choices for the United States.** , 1987

**Environmental Permits** Donna Rona, 2012-12-06 Environmental permits enable regulatory agencies to control the disturbance and degradation of the environment caused by man's activities Created by governments through legislation the permit processes are administered by elected officials Environmental legislation is relatively new as an independent field of the law the laws themselves are primarily a conglomeration of older legal doctrines from other fields of law modified and adapted for particular situations Landau and Rheingold 1971 Like other laws environmental laws are meant to serve and protect the rights and well being of the public However like other laws they have created confusion a proliferation of costly paperwork and some inequities Numerous statutes dealing with most aspects of pollution exist at every level of government so many in fact that they frequently conflict and overlap These statutes establish a public policy toward polluters They also empower the regulatory bodies that issue

permits It would be impossible to compile a list of requirements for each type of permit Therefore this book will acquaint the reader with the common aspects of environmental permits their terminology components and application processes This book covers the permit process from initial agencies applicant contacts through application parts and procedures to application approval Special emphasis has been placed on bringing together copies of laws and lists of agencies as appendices The appendices give the reader easy access to materials that will help clarify the permit process **The Control of Resources**

Partha Dasgupta,1982 Common property externalities and the distribution of income Goals constraints and accounting prices Environmental control under uncertainty Dimensions of welfare Fisheries and aquifers the stationary case Fisheries and aquifers the transient phase The economics of pollution control Forest and trees Uncertainty irreversibility and options values The Ultimate Resource Julian Lincoln Simon,2023-11-14 A lively answer to those who sound alarms about population growth and resource use The Ultimate Resource challenges conventional beliefs about the scarcity of energy and natural resources the pollution of the environment and the perils of overpopulation for our standard of living In this provocative book Julian Lincoln Simon argues that natural resources are not finite in any meaningful way and that using such resources now will not slow the rate of future economic growth In the short run all resources are limited A greater use of any resource means pressure on its supply and hence an increased price In the long run however history shows that human creativity overcomes natural obstacles to economic growth and leads to a lower cost and price than before The ultimate resource Simon contends is the human imagination coupled to the human spirit This timely book will fundamentally change how you think about a host of issues from immigration and human fertility to forecasts of population change and the use of taxpayer dollars for population control The Ultimate Resource demonstrates that the primary constraint on our national and world economic growth is our capacity for the creation of new ideas The more people who can be trained to help solve the problems that confront us the faster we might remove the obstacles and the greater the economic inheritance we can bequeath to our descendants **The Human Impact on the Natural Environment** Andrew Goudie,2000 The book also discusses the development of ideas on global change
