Bogusławska-Tafelska,Anna Drogosz,2015-10-13 There is undoubtedly considerable intellectual and methodological progress evident in approaches to linguistics from systemic and formal methods to post Newtonian transpersonal non local models of

meaning co creation built within contemporary language studies Indeed such changes are constant the 20th century product orientation of linguistic research is currently being complemented by ecolinguistic processes with the linearity of scientific perception and treatment being replaced by the dynamic and multispectral approach of ecological theory This book provides a richly detailed analysis of this profound shift within contemporary language and communication research A particularly interesting facet of this volume is the proposal that the architecture of the human organism is transpersonally in constant relation with its immediate surroundings as well as with non local multilevel surroundings This connection is based not only on the cognitive connection of minds or neurocognitive contacts with the nervous and sensual systems of communicators but on the multidimensional relationship between the manifold communicative modalities living systems possess Human communication is embedded within a given local communicative situation as well within the global non local environment via the basic ontology of entanglement The human communicative process is always evolving as a result of the constant fluctuations of life processes Indeed the conclusions presented in this volume open up a new approach to present day linguistics that human language is an essential life process
