Ecology of the Southern California Bight Murray D. Dailey, Donald J. Reish, Jack W. Anderson, 1993 Here is a benchmark study of one significant stretch of the Pacific Ocean the Southern California Bight Extending from Point Conception to the Mexican border and out to the 200 mile limit these waters have never before been investigated in such detail from so many points of view by such an eminent group of scientists The twenty five expert contributors summarize everything known about the physical chemical geological and biological characteristics of the area in individual chapters the volume concludes with a synthesis of the information presented In addition chapters are devoted to the influence of humans on the marine environment and to the various laws and governmental agencies concerned with protecting it Because Southern California is so heavily populated and because the ocean is a major recreational area for its people the information in this unique volume will be invaluable for the region s planners and decisionmakers as well as for all those who study the globe s marine resources and ecology
