Ecosystem Structure And Function:

Ecosystem Structure and Function John A. Wiens, 1972 **Biodiversity in Ecosystems** Juan A. Blanco, Yueh-Hsin Lo, Shovonlal Roy, 2015-04-17 The term biodiversity has become a mainstream concept that can be found in any newspaper at any given time Concerns on biodiversity protection are usually linked to species protection and extinction risks for iconic species such as whales pandas and so on However conserving biodiversity has much deeper implications than preserving a few although important species Biodiversity in ecosystems is tightly linked to ecosystem functions such as biomass production organic matter decomposition ecosystem resilience and others Many of these ecological processes are also directly implied in services that the humankind obtains from ecosystems The first part of this book will introduce different concepts and theories important to understand the links between ecosystem function and ecosystem biodiversity The second part of the book provides a wide range of different studies showcasing the evidence and practical implications of such relationships

Ecosystem Structure and Function John A. Wiens, 1972 *Global Change and River Ecosystems - Implications for Structure, Function and Ecosystem Services* R. Jan Stevenson, Sergi Sabater, 2015-03-21 Rivers around the world are threatened by changes in land use climate hydrologic cycles and biodiversity Global changes in rivers include but are not restricted to water flow interruptions temperature increases loss of hydrological connectivity altered water residence times changes in nutrient loads increasing arrival of new chemicals simplification of the physical structure of the systems occurrence of invasive species and biodiversity losses All of them affect the structure and functioning of the river ecosystem and thereby their ecosystem services Understanding the responses of river ecosystems and their services to global change is essential for protecting human well being in all corners of the planet Rivers provide critical benefits by providing food from fisheries and irrigation regulating biogeochemical balances and enriching our aesthetic and cultural experience Predicting responses of rivers to global change is challenged by the complexity of interactions among these man made drivers across a mosaic of natural hydrogeomorphic and climatic settings This book explores the broad range of determinants defining global change and their effects on river ecosystems Authors have provided thoughtful and insightful treatments of specific topics that relate to the broader theme of global change regulation of river ecosystems The Structure, Function and Management Implications of Fluvial Sedimentary Systems Fiona J.
