Maloney,Jere Confrey,Kenny H. Nguyen,2014-06-01 The driving forces behind mathematics learning trajectories is the need to understand how children actually learn and make sense of mathematics how they progress from prior knowledge through intermediate understandings to the mathematics target understandings and how to use these insights to improve instruction and student learning In this book readers will come to understand what learning trajectories are the research and methodology that are necessary for developing them and gain insight into potential applications of learning trajectories A synthesis and research outcome in their own right learning trajectories provide detailed description of instructionally grounded development of mathematical concepts and reasoning from the perspective of student learning and overall building on decades of accumulated experience in mathematics education research However their greater importance may lie in their potential as frameworks that contribute an unprecedented coherence across classroom instruction professional development standards and assessment by focusing squarely on conceptual understanding and reasoning instead of assessment driven procedural knowledge This potential was sufficiently compelling as an organizing framework to have been cited as a basis for the Common Core mathematics standards the new mathematics learning expectations that are now consistent across most of the United States Among the conference attendees were the writers of the Common Core State Standards for Mathematics at the beginning of the Standards drafting process This book is an outgrowth of a conference on learning trajectories hosted in 2009 at North Carolina State University which examined research on learning trajectories An overarching message of the chapters in this volume is that learning trajectories by focusing on how children s mathematical reasoning develops are coming into their own as a rigorous underpinning for both instruction and accountability Some of the learning scientists featured in this volume have played major roles learning trajectories evolution from small scale day to day conjectures by individual teachers to systematic research endeavors that teachers and scientists alike can use to interpret standards plan instruction and formatively assess student work The work in this volume will be of interest to mathematics educators teachers and professional development specialists      **Modern Mathematics** Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments

within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
