 Hodgson, 2024-11-01 Proceedings of the 3rd International Seminar of the International Federation for Heat Treatment held in
 Melbourne in 1991 with the special focus on Quenching and Carburising Quenching and Carburising are two of the most
 basic and widely practised steel heat treatment processes Each allows the base properties and performance of the steel to be
 significantly enhanced such that a relatively inexpensive and simple starting material can be used for a wide range of
 demanding applications Nevertheless the technological developments within those two processes are often ignored in favour
 of high tech surface treatments The aim of Quenching and Carburising was to review the recent advancements that have
 been made in these fields Technical Aspects of Critical Materials Use by the Steel Industry: B. Proceedings of a public
