Hasumi, 2006-11-14 **Invariant Subspaces of Hardy Classes on Infinitely Connected Open Surfaces** Charles W. Neville, 1975 We generalize Beurling's theorem on the shift invariant subspaces of Hardy class H^2 of the unit disk to the Hardy classes of admissible Riemann surfaces Essentially an open Riemann surface is admissible if it admits enough bounded multiple valued analytic functions The class of admissible surfaces contains many infinitely connected surfaces and all finite surfaces but does not contain all plane regions admitting sufficiently many bounded analytic functions to separate points We generalize the theorem of A H Read and the Cauchy integral formula to the boundary values on the Hayashi boundary of functions in the Hardy classes of admissible surfaces *Invariant Subspaces of Hardy Classes on Infinitely Connected Open Surfaces* Charles W. Potential Theory - ICPT 94 Josef Kral, Jaroslav Lukes, Ivan Netuka, Jiri Vesely, 2011-10-13 No detailed description available for Potential Theory ICPT 94 The Hardy Space of a Slit Domain Alexandru Aleman, Nathan S. Feldman, William T. Ross, 2010-01-08 If H is a Hilbert space and $T \in \mathcal{L}(H)$ is a continuous linear operator a natural question to ask is What are the closed subspaces M of H for which $T M \subset M$ Of course the famous invariant subspace problem asks whether or not T has any non trivial invariant subspaces This monograph is part of a long line of study of the invariant subspaces of the operator T_M multiplication by the independent variable z i e $M_f(z) = zf(z)$ on a $z \in H$ Hilbert space of analytic functions on a bounded domain G in \mathbb{C} The characterization of these M invariant subspaces is particularly interesting since it entails both the properties z of the functions inside the domain G their zero sets for example as well as the behavior of the functions near the boundary of G The operator M is not only interesting in its own right but often serves as a model operator for certain classes of linear operators By this we mean that given an operator T on H with certain properties certain subnormal operators or two isometric operators with the right spectral properties etc there is a Hilbert space of analytic functions on a domain G for which T is unitary equivalent to M **Progress In Analysis, Proceedings Of The 3rd Isaac Congress (In 2 Volumes)** Heinrich G W Begehr, Robert Pertsch Gilbert, Man-wah Wong, 2003-08-04 The biannual ISAAC congresses provide information about recent progress in the whole area of analysis including applications and computation This book constitutes the proceedings of the third meeting Progress in Analysis International Society for Analysis, Applications, and Computation.

Topics in Interpolation Theory Bernd Fritzsche,Victor Katsnelson,Bernd Kirstein,2012-12-06 About one half of the papers in this volume are based on lectures which were presented at a conference at Leipzig University in August 1994 which was dedicated to Vladimir Petrovich Potapov He would have been eighty years old These have been supplemented by 1 Historical material based on reminiscences of former colleagues students and associates of V P Potapov 2 Translations of a number of important papers which serve to clarify the Potapov approach to problems of interpolation and extension as well as a number of related problems and methods and are relatively unknown in the West 3 Two expository papers which have been especially written for this volume For purposes of discussion it is convenient to group the technical papers in this volume into six categories We will now run through them lightly first listing the major theme then in parentheses the authors of the relevant papers followed by discussion Some supplementary references are listed at the end OT72 which appears frequently in this volume refers to Volume 72 in the series Operator Theory Advances and Applications It was dedicated to V P Potapov 1 Multiplicative decompositions Yu P Ginzburg M S Livsic I V Mikhailova V I Smirnov

FitzGerald,Sheng Gong,2004 The papers contained in this book address problems in one and several complex variables The main theme is the extension of geometric function theory methods and theorems to several complex variables The papers present various results on the growth of mappings in various classes as well as observations about the boundary behavior of mappings via developing and using some semi group methods Topics In Mathematical Analysis: A Volume Dedicated To The Memory Of A L Cauchy Themistocles M Rassias,1989-06-01 This volume aims at surveying and exposing the main ideas and principles accumulated in a number of theories of Mathematical Analysis The underlying methodological principle is to develop a unified approach to various kinds of problems In the papers presented outstanding research scientists discuss the present state of the art and the broad spectrum of topics in the theory *The Corona Problem* Ronald G. Douglas,Steven G. Krantz,Eric T. Sawyer,Sergei Treil,Brett D. Wick,2014-08-05 The purpose of the corona workshop was to consider the corona problem in both one and several complex variables both in the

context of function theory and harmonic analysis as well as the context of operator theory and functional analysis It was held in June 2012 at the Fields Institute in Toronto and attended by about fifty mathematicians This volume validates and commemorates the workshop and records some of the ideas that were developed within The corona problem dates back to 1941 It has exerted a powerful influence over mathematical analysis for nearly 75 years There is material to help bring people up to speed in the latest ideas of the subject as well as historical material to provide background Particularly noteworthy is a history of the corona problem authored by the five organizers that provides a unique glimpse at how the problem and its many different solutions have developed There has never been a meeting of this kind and there has never been a volume of this kind Mathematicians both veterans and newcomers will benefit from reading this book This volume makes a unique contribution to the analysis literature and will be a valuable part of the canon for many years to come

Aspects Of Complex Analysis, Differential Geometry, Mathematical Physics And Applications - Proceedings Of The Fourth International Workshop On Complex Structures And Vector Fields Stancho Dimiev, Kouei Sekigawa, 1999-09-17 This volume constitutes the proceedings of a workshop whose main purpose was to exchange information on current topics in complex analysis differential geometry mathematical physics and applications and to group aspects of new mathematics

The Theory of Subnormal Operators John B. Conway, 1991 In a certain sense subnormal operators were introduced too soon because the theory of function algebras and rational approximation was also in its infancy and could not be properly used to examine the class of operators The progress in the last several years grew out of applying the results of rational approximation from the Preface This book is the successor to the author's 1981 book on the same subject In addition to reflecting the great strides in the development of subnormal operator theory since the first book the present work is oriented towards rational functions rather than polynomials Although the book is a research monograph it has many of the traits of a textbook including exercises The book requires background in function theory and functional analysis but is otherwise fairly self contained The first few chapters cover the basics about subnormal operator theory and present a study of analytic functions on the unit disk Other topics included are some results on hypernormal operators an exposition of rational approximation interspersed with applications to operator theory a study of weak star rational approximation a set of results that can be termed structure theorems for subnormal operators and a proof that analytic bounded point evaluations exist
