Harmonic Maps And Minimal Immersions Through Representation Theory Perspectives In Mathematics Volume 1:

Harmonic Maps and Minimal Immersions Through Representation Theory Gábor Tóth (Ph. D.),1990 Algebraic and Analytic Methods in Representation Theory ,1996-09-27 This book is a compilation of several works from well recognized figures in the field of Representation Theory The presentation of the topic is unique in offering several different points of view which should make the book very useful to students and experts alike Presents several different points of view on key topics in representation theory from internationally known experts in the field **Barsotti Symposium in Algebraic Geometry** Valentino Cristante,William Messing,2014-07-21 Barsotti Symposium in Algebraic Geometry contains papers corresponding to the lectures given at the 1991 memorial meeting held in Abano Terme in honor of Iacopo Barsotti This text reflects Barsotti's significant contributions in the field This book is composed of 10 chapters and begins with a review of the centers of three dimensional simple algebras The succeeding chapters deal with the theoretical aspects of the Abelian varieties Witt realization of p -Adic Barsotti Tate Groups and hypergeometric series and functions These topics are followed by discussions of logarithmic spaces and the estimates for and inequalities among A numbers The closing chapter describes the moduli of Abelian varieties in positive characteristic This book will be of value to mathematicians **Causal Symmetric Spaces** Gestur Olafsson,Joachim Hilgert,1996-09-11 This book is intended to introduce researchers and graduate students to the concepts of causal symmetric spaces To date results of recent studies considered standard by specialists have not been widely published This book seeks to bring this information to students and researchers in geometry and analysis on causal symmetric spaces Includes the newest results in harmonic analysis including Spherical functions on ordered symmetric space and the holomorphic discrete series and Hardy spaces on compactly causal symmetric spaces Deals with the infinitesimal situation coverings of symmetric spaces classification of causal symmetric pairs and invariant cone fields Presents basic geometric properties of semi simple symmetric spaces Includes appendices on Lie algebras and Lie groups Bounded symmetric domains Cayley transforms Antiholomorphic Involutions on Bounded Domains and Para Hermitian Symmetric Spaces **The Arithmetic and Spectral Analysis of Poincaré Series** James W. Cogdell,Ilya Piatetski-Shapiro,2014-07-14 The Arithmetic and Spectral Analysis of Poincaré series deals with the spectral properties of Poincaré series and their relation to Kloosterman sums In addition to Poincaré series for an arbitrary Fuchsian group of the first kind the spectral expansion of the Kloosterman Selberg zeta function is analyzed along with the adelic theory of Poincaré series and Kloosterman sums over a global function field This volume is divided into two parts and begins with a discussion on Poincaré series and Kloosterman sums for Fuchsian groups of the first kind A conceptual proof of Kuznetsov's formula and its generalization are presented in terms of the spectral analysis of Poincaré series in the framework of representation theory An analysis of the spectral expansion of the Kloosterman Selberg zeta function is also included The second part develops the adelic theory of Poincaré

series and Kloosterman sums over a global function field The main result here is to show that in this context the analogue of the Linnik conjecture can be derived from the Ramanujan conjecture over function fields Whittaker models Kirillov models and Bessel functions are also considered along with the Kloosterman spectral formula convergence and continuation This book will be a valuable resource for students of mathematics

The Geometry of Algebraic Fermi Curves D

Gieseke,2012-12-02 The Geometry of Algebraic Fermi Curves deals with the geometry of algebraic Fermi curves with emphasis on the inverse spectral problem Topics covered include the periodic Schrödinger operator and electrons in a crystal one dimensional algebraic Bloch varieties separable Bloch varieties and monodromy for separable and generic Bloch varieties Compactification the potential zero and density of states are also discussed This book consists of 13 chapters and begins by recalling the static lattice approximation for electronic motion at low temperature in a pure finite sample of a d dimensional crystal The position of the Fermi energy and the geometry of the Fermi hypersurface in relation to the metallic properties of the crystal are described The following chapters focus on the Bloch variety associated with a discrete two dimensional periodic Schrödinger operator algebraic Bloch varieties in one dimension compactification of the Bloch variety and the potential zero The geometry of the Bloch variety of a separable potential is also considered along with the topology of the family of Fermi curves The final chapter demonstrates how the Bloch variety is determined by the density of states This monograph will be a useful resource for students and teachers of mathematics

Submanifolds and Holonomy Jürgen

Berndt,Sergio Console,Carlos Enrique Olmos,2016-02-22 Submanifolds and Holonomy Second Edition explores recent progress in the submanifold geometry of space forms including new methods based on the holonomy of the normal connection This second edition reflects many developments that have occurred since the publication of its popular predecessor New to the Second Edition New chapter on normal holonomy

Developments of Harmonic Maps, Wave Maps and Yang-Mills Fields into Biharmonic Maps, Biwave Maps and Bi-Yang-Mills Fields Yuan-Jen Chiang,2013-06-18 Harmonic maps between Riemannian manifolds were first established by James Eells and Joseph H Sampson in 1964 Wave maps are harmonic maps on Minkowski spaces and have been studied since the 1990s Yang Mills fields the critical points of Yang Mills functionals of connections whose curvature tensors are harmonic were explored by a few physicists in the 1950s and biharmonic maps generalizing harmonic maps were introduced by Guoying Jiang in 1986 The book presents an overview of the important developments made in these fields since they first came up Furthermore it introduces biwave maps generalizing wave maps which were first studied by the author in 2009 and bi Yang Mills fields generalizing Yang Mills fields first investigated by Toshiyuki Ichiyama Jun Ichi Inoguchi and Hajime Urakawa in 2008 Other topics discussed are exponential harmonic maps exponential wave maps and exponential Yang Mills fields

 demonstrate how certain portions of differential geometry DG and the theory of partial differential equations PDEs apply to
 general relativity and quantum gravity theory These books supply some of the ad hoc DG and PDEs machinery yet do not
 constitute a comprehensive treatise on DG or PDEs but rather authors choice based on their scientific mathematical and
