

Understanding Epilepsy

What is epilepsy?

Epilepsy is a long-term condition that causes a person to have recurrent seizures. A seizure is a sudden, temporary change in the way the brain works, which can cause a person to lose consciousness, convulse, or experience other unusual symptoms. The exact cause of epilepsy is often unknown, but it can be caused by a variety of factors, including genetic factors, brain injury, infection, or a stroke.

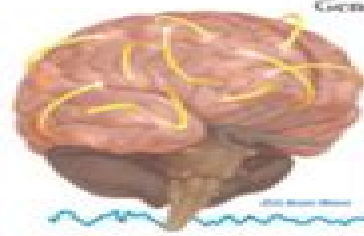

What is an epileptic seizure?

The word "seizure" is derived from the Latin word "seizure," which means "to take possession of." An epileptic seizure is a sudden, temporary change in the way the brain works, which can cause a person to lose consciousness, convulse, or experience other unusual symptoms. The exact cause of epilepsy is often unknown, but it can be caused by a variety of factors, including genetic factors, brain injury, infection, or a stroke.

There are two main types of epileptic seizures: generalized seizures and partial (focal) seizures. Generalized seizures involve the entire brain, while partial (focal) seizures involve only a specific part of the brain. The symptoms of a seizure can vary widely, depending on the type of seizure and the area of the brain that is affected. Some common symptoms include loss of consciousness, convulsions, and unusual sensations.

Diagnosing and treating epilepsy

The first step in diagnosing epilepsy is to determine if a person has had two or more unprovoked seizures. If a person has had only one seizure, it is not yet considered epilepsy. Once a diagnosis of epilepsy has been made, the next step is to determine the type of seizure and the area of the brain that is affected. This is typically done through a combination of medical history, physical examination, and diagnostic tests such as EEG and MRI. Treatment for epilepsy typically involves the use of anti-seizure medications. In some cases, surgery may be an option.

Managing your epilepsy

Managing epilepsy involves a combination of medical treatment and lifestyle changes. It is important to take anti-seizure medications as prescribed and to avoid triggers that can cause seizures, such as stress, fatigue, and alcohol. Regular medical check-ups and EEG monitoring are also important for managing the condition. In some cases, lifestyle changes such as a healthy diet and regular exercise can also help manage epilepsy.

Presurgical Evaluation of Epileptics Heinz G. Wieser, Christian E. Elger, 2012-12-06 From the 12th to the 15th September 1985 the International Symposium on Methods of Presurgical Evaluation of Epileptic Patients Basics Techniques and Implications for Epileptology and Surgical Epilepsy Therapy was held in Zurich This symposium was a consequence of the increasing recognition by Europeans especially from German speaking countries of a growing need for surgical therapy of epileptics The main aim was to provide a venue for critical review and lively discussion of presurgical evaluation protocols with special emphasis on the electrophysiological aspects including invasive techniques To provide a necessary background some basic aspects along with postsurgical results had to be dealt with by leading experts in the different fields of experimental and clinical epileptology and neurosurgery It was intended to be an international but moderately scaled meeting Finally however in addition to the European contingent there were participants from Australia Brazil Canada Israel Japan Korea and the United States of America including pioneers from the surgically active centers This international discussion was surely facilitated by the close temporal relationship to the International Congresses XIIIth World Congress of Neurology and XVIth Epilepsy International Congress which took place in Hamburg And probably most important is the fact that the Zurich symposium was dedicated to Prof Rudolf Hess and his lifelong devotion to epilepsy diagnosis and treatment in Switzerland as outlined in the Honorary Address by his eminent colleague and personal friend Prof Henri Gastaut
