

EQ

- Identifying, perceiving, and regulating emotions through five domains: self-awareness, self-regulation, empathy, and social skills (Goleman, 2020).
- Subject to environmental and social influences so can be actively trained and developed over time.
- No universally standardized test. Testing may involve ability tests and self-reported analyses of a person's own typical behavior (Cotruș, Stanciu and Bulborea, 2013).
- Having the ability to interpret other people's emotions correctly or attending to emotional cues does not mean they have high IQ (Goleman, 2020).
- A pivotal role in general well-being, promoting a person's mental health and quality of relationships (David, 2016). Can lead to interpersonal success even if IQ is average.

IQ

- Logical reasoning, cognitive functions, memory, word comprehension, maths skills, abstract and spatial thinking, mental agility.
- Considered a stable trait influenced by genetics.
- Assessed through standardized intelligence tests, which compare individuals' scores to the average performance of other participants in their age group.
- Having good analytical skills does not necessarily translate in the ability to understanding other people's emotions (Goleman, 2020).
- Can contribute to greater academic achievement and job performance.

Electron-Emission Gas Discharges I / Elektronen-Emission Gasentladungen I S. Flügge, 2012-12-06 v Formation of negative ions by processes other than attachment in the gaseous phase at low X po 17 Introduction As early as 1912 J J THOMSON 32J in his first mass spectro graph observed negative ions of 0 Cl H and what he believed to be N He at first ascribed these to possible dissociation of polar gaseous compounds by electron impact but control studies using ionization at low energies in glow discharges indicated that this was not the origin O W RICHARDSON 33J in his book on emission of electricity from hot bodies reported negative ions to come from hot salts From there on many experimental studies over the years indicated that negative ions could be formed by various processes By the middle nineteen hundred and thirties the data fairly clearly identified several processes as being active and MASSEY and SMITH 34J developed the theory underlying some of them More data are summarized in MASSEY S excellent little monograph on Negative Ions and in L SSEY and BURHOP S recent book 35 Since that period stimulated by various investigations and certain industrial problems very careful studies of the appearance of such ions by mass spectrograph have been carried out in the laboratory of K G EMELEUS in Belfast by SLOANE and his co workers 3J that have clarified the questions and indicated what ions have been observed and something of the processes at work

Thermal Dosimetry and Treatment Planning Michel Gautherie,2012-12-06 When in the future improved and more flexible heating equipment becomes available and when hyperthermia is applied more routinely computerized simulations of treatments will become commonplace as they are in radiation therapy For hyperthermia however such simulations will be used not only for the traditional role of planning patient treatment but also for three other applications not needed in radiation therapy the comparative evaluation of equipment feedback control during treatment and the post treatment evaluation of therapy The present simulations of hyperthermia are crude and simple when compared with what is required for these future applications a fact which indicates the need for considerable research and development in this area Indeed this research is proceeding rapidly within the hyperthermia community where three dimensional power deposition and

temperature calculations have just become available for realistic patient anatomies Of equal significance are the even more rapid development in diagnostic imaging for the determination and display of patient anatomy and blood flow rates information required for the planning of realistic hyperthermia treatment These simulations will be very valuable tools which can be used to great advantage when combined with data obtained from treatments of patients
