Equations In Free Semigroups:

Equations in Free Semigroups Iñaki Khmelevskii, 1976 This monography deals with equations in a free semigroup with a finite number of generators Introduction *Semigroups. Theory and Applications* Helmut Jürgensen, Gerard Lallement, Hanns J. Weinert, 2006-11-14 **Lattices, Semigroups, and Universal Algebra** Jorge Almeida, Gabriela Bordalo, Philip Dwinger, 2013-11-11 This volume contains papers which for the most part are based on talks given at an international conference on Lattices Semigroups and Universal Algebra that was held in Lisbon Portugal during the week of June 20 24 1988 The conference was dedicated to the memory of Professor Antonio Almeida Costa a Portuguese mathematician who greatly contributed to the development of the algebra in Portugal on the 10 anniversary of his death The themes of the conference reflect some of his research interests and those of his students The purpose of the conference was to gather leading experts in Lattices Semigroups and Universal Algebra and to promote a discussion of recent developments and trends in these areas All three fields have grown rapidly during the last few decades with varying degrees of interaction Lattice theory and Universal Algebra have historically evolved alongside with a large overlap between the groups of researchers in the two fields More recently techniques and ideas of these theories have been used extensively in the theory of semigroups Conversely some developments in that area may inspire further developments in Universal Algebra On the other hand techniques of semi group theory have naturally been employed in the study of semilattices Several papers in this volume elaborate on these interactions *LATIN 2000: Theoretical Informatics* Gaston H. Gonnet, Daniel Panario, 2000 This book constitutes the refereed proceedings of the 4th International Conference Latin American Theoretical Informatics LATIN 2000 held in Punta del Est Uruguay in April 2000 The 42 revised papers presented were carefully reviewed and selected from a total of 87 submissions from 26 countries Also included are abstracts or full papers of several invited talks The papers are organized in topical sections on random structures and algorithms complexity computational number theory and cryptography algebraic algorithms computability automata and formal languages and logic and programming theory *Semigroups And Formal Languages - Proceedings Of The International Conference* Gracinda M S Gomes, Mario J J Branco, Jorge M Andre, Vitor H Fernandes, John Fountain, John C Meakin, 2007-06-11 This festschrift volume in honour of Donald B McAlister on the occasion of his 65th birthday presents papers from leading researchers in semigroups and formal languages The contributors cover a number of areas of current interest from pseudovarieties and regular languages to ordered groupoids and one relator groups and from semigroup algebras to presentations of monoids and transformation semigroups The papers are accessible to graduate students as well as researchers seeking new directions for future work *Foundations of Software Science and Computational Structures* Roberto Amadio, 2008-04-03 This book contains the proceedings of the 11th International Conference on Foundations of Software Science and Computational Structures It covers theories and methods to support analysis synthesis transformation and verification of software systems

Lothaire,1997-05-29 Combinatorics on words or finite sequences is a field which grew simultaneously within disparate branches of mathematics such as group theory and probability It has grown into an independent theory finding substantial applications in computer science automata theory and linguistics This volume is the first to present a thorough treatment of this theory All of the main results and techniques are covered The presentation is accessible to undergraduate and graduate level students in mathematics and computer science as well as to specialists in all branches of applied mathematics *Handbook of Formal Languages* Grzegorz Rozenberg,1997 This uniquely authoritative and comprehensive handbook is the first work to cover the vast field of formal languages as well as their applications to the divergent areas of linguistics developmental biology computer graphics cryptology molecular genetics and programming languages The work has been divided into three volumes Mathematical Foundations of Computer Science 2000 Mogens Nielsen,Branislav Rovn,2003-06-29 This book constitutes the refereed proceedings of the 25th International Symposium on Mathematical Foundations of Computer Science MFCS 2000 held in Bratislava Slovakia in August September 2000 The 57 revised full papers presented together with eight invited papers were carefully reviewed and selected from a total of 147 submissions The book gives an excellent overview on current research in theoretical informatics All relevant foundational issues from mathematical logics as well as from discrete mathematics are covered Anybody interested in theoretical computer science or the theory of computing will benefit from this book *Mathematical*

Foundations of Computer Science 2004 Jirí Fiala, Václav Koubek, Jan Kratochvíl, 2004-08-06 This volume contains the papers presented at the 29th Symposium on Mathematical Foundations of Computer Science MFCS 2004 held in Prague Czech Republic August 22-27 2004 The conference was organized by the Institute for Theoretical Computer Science ITI and the Department of Theoretical Computer Science and Mathematical Logic KTIML of the Faculty of Mathematics and Physics of Charles University in Prague It was supported in part by the European Association for Theoretical Computer Science EATCS and the European Research Consortium for Informatics and Mathematics ERCIM Traditionally the MFCS symposia encourage high quality research in all branches of theoretical computer science Ranging in scope from automata formal languages data structures algorithms and computational geometry to complexity theory models of computation and applications including computational biology cryptography security and artificial intelligence the conference offers a unique opportunity to researchers from diverse areas to meet and present their results to a general audience The scientific program of this year's MFCS took place in the lecture halls of the recently reconstructed building of the Faculty of Mathematics and Physics in the historical center of Prague with the famous Prague Castle and other celebrated historical monuments in sight The view from the windows was a challenging competition for the speakers in the fight for the attention of the audience But we did not fear the result Due to the unusually tough competition for this year's MFCS the admitted presentations certainly attracted considerable interest The conference program and the proceedings consisted of 60 contributed papers selected by the Program Committee from a total of 167 submissions

Automata, Languages and Programming Josep Diaz, Juhani Karhumäki, Arto Lepistö, Donald Sannella, 2004-07-09 The 31st International Colloquium on Automata Languages and Programming ICALP 2004 was held from July 12 to July 16 in Turku Finland This volume contains all contributed papers presented at ICALP 2004 together with the invited lectures by Philippe Flajolet INRIA Robert Harper Carnegie Mellon Monika Henzinger Google Martin Hofmann Munich Alexander Razborov Princeton and Moscow Wojciech Rytter Warsaw and NJIT and Mihalis Yannakakis Stanford ICALP is a series of annual conferences of the European Association for Theoretical Computer Science EATCS The first ICALP took place in 1972 and the ICALP program currently consists of track A focusing on algorithms automata complexity and cryptography and track B focusing on databases logics semantics and principles of programming In response to the call for papers the program committee received 379 papers 272 for track A and 107 for track B This is the highest number of submitted papers in the history of ICALP conferences The program committee selected 97 papers for inclusion into the scientific program The program committee for track A met on March 27 and 28 in Barcelona and selected 69 papers from track A The program committee for track B selected 28 papers from track B in the course of an electronic discussion lasting for two weeks in the second half of March The selections were based on originality quality and relevance to theoretical computer science We wish to thank all authors who submitted extended abstracts for consideration the program committee for its hard work and all referees who assisted the program committee in the evaluation process

Quantum

Dynamical Semigroups and Applications Robert Alicki, K. Lendi, 2007-04-03 Reinvigorated by advances and insights the quantum theory of irreversible processes has recently attracted growing attention This volume introduces the very basic concepts of semigroup dynamics of open quantum systems and reviews a variety of modern applications Originally published as Volume 286 1987 in Lecture in Physics this volume has been newly typeset revised and corrected and also expanded to include a review on recent developments *Mathematical Aspects Of Natural And Formal Languages* Gheorghe Paun, 1994-10-25 This book contains original reviews by well known workers in the field of mathematical linguistics and formal language theory written in honour of Professor Solomon Marcus on the occasion of his 70th birthday Some of the papers deal with contextual grammars a class of generative devices introduced by Marcus motivated by descriptive linguistics Others are devoted to grammar systems a very modern branch of formal language theory Automata theory and the algebraic approach to computer science are other well represented areas While the contributions are mathematically oriented practical issues such as cryptography grammatical inference and natural language processing are also discussed

The Compressed Word Problem for Groups Markus Lohrey, 2014-04-04 The Compressed Word Problem for Groups provides a detailed exposition of known results on the compressed word problem emphasizing efficient algorithms for the compressed word problem in various groups The author presents the necessary background along with the most recent results on the compressed word problem to create a cohesive self contained book accessible to computer scientists as well as mathematicians Readers will quickly reach the frontier of current research which makes the book especially appealing for students looking for a currently active research topic at the intersection of group theory and computer science The word problem introduced in 1910 by Max Dehn is one of the most important decision problems in group theory For many groups highly efficient algorithms for the word problem exist In recent years a new technique based on data compression for providing more efficient algorithms for word problems has been developed by representing long words over group generators in a compressed form using a straight line program Algorithmic techniques used for manipulating compressed words has shown that the compressed word problem can be solved in polynomial time for a large class of groups such as free groups graph groups and nilpotent groups These results have important implications for algorithmic questions related to automorphism groups **Semigroups, Automata And Languages** Jorge Almeida, Pedro V Silva, Gracinda M S

Gomes, 1996-01-27 The conference was a rare occasion for different schools and perspectives to meet in a single event bringing together researchers interested in semigroups automata and languages The proceedings contain both surveys and research reports which have been carefully refereed They should be of value to both mathematicians and computer scientists

Computational and Experimental Group Theory Alexandre Borovik, Alexei G. Myasnikov, 2004 The focus of algorithmic group theory shifted from the decidability undecidability type of result to the complexity of algorithms This title contains papers that reflect that paradigm shift It presents articles that are based on the AMS ASL Joint Special Session

Interactions Between Logic Group Theory and Computer Science *Semigroups and Their Applications* Simon M. Goberstein, Peter M. Higgins, 2012-12-06 Most papers published in this volume are based on lectures presented at the Chico Conference on Semigroups held on the Chico campus of the California State University on April 10-12 1986 The conference was sponsored by the California State University Chico in cooperation with the Engineering Computer Sciences Department of the Pacific Gas and Electric Company The program included seven 50 minute addresses and seventeen 30 minute lectures Speakers were invited by the organizing committee consisting of S M Goberstein and P M Higgins The purpose of the conference was to bring together some of the leading researchers in the area of semigroup theory for a discussion of major recent developments in the field The algebraic theory of semigroups is growing so rapidly and new important results are being produced at such a rate that the need for another meeting was well justified It was hoped that the conference would help to disseminate new results more rapidly among those working in semigroups and related areas and that the exchange of ideas would stimulate research in the subject even further These hopes were realized beyond all expectations
