**New Methods of Concurrent Checking** Michael Gössel, Vitaly Ocheretny, Egor Sogomonyan, Daniel Marienfeld, 2008-04-26 Computers are everywhere around us We for example as air passengers car drivers laptop users with Internet connection cell phone owners hospital patients inhabitants in the vicinity of a nuclear power station students in a digital library or customers in a supermarket are dependent on their correct operation Computers are incredibly fast inexpensive and equipped with almost unimaginable large storage capacity Up to 100 million transistors per chip are quite common today a single transistor for each citizen of a large capital city in the world can be easily accommodated on an ordinary chip The size of such a chip is less than 1 cm This is a fantastic achievement for an unbelievably low price However the very small and rapidly decreasing dimensions of the transistors and their connections over the years are also the reason for growing problems with reliability that will dramatically increase for the nano technologies in the near future Can we always trust computers Are computers always reliable Are chips sufficiently tested with respect to all possible permanent faults if we buy them at a low price or have errors due to undetected permanent faults to be discovered by current checking Besides permanent faults many temporary or transient faults are also to be expected On-line Error Detection and Fast Recover Techniques for Dependable Embedded Processors Matthias Pflanz, 2003-07-31 This book presents a new approach to on line observation and concurrent checking of processors by refining and improving known techniques and introducing new ideas The proposed on line error detection and fast recover techniques support and complement other established methods In combination with other on line observation principles and with a combined hardware software test these techniques are used to fulfill a complete self check scheme for an embedded processor Error Detection, Decoding, and Error Correction for Circuit Codes John Christopher Beebe, 1972

Radiation Effects and Soft Errors in Integrated Circuits and Electronic Devices Ronald Donald Schrimpf, Dan M. Fleetwood, 2004 This book provides a detailed treatment of radiation effects in electronic devices including effects at the material device and circuit levels The emphasis is on transient effects caused by single ionizing particles single event effects and soft errors and effects produced by the cumulative energy deposited by the radiation total ionizing dose effects Bipolar Si and SiGe metal oxide semiconductor MOS and compound semiconductor technologies are discussed In addition to considering the specific issues associated with high performance devices and technologies the book includes the

background material necessary for understanding radiation effects at a more general level      *Cryptographic Hardware and Embedded Systems - CHES 2008* Elisabeth Oswald, 2008-07-18 by Andrey Bogdanov Thomas Eisenbarth Andy Rupp and Christopher Wolf The purpose of the award is to formally acknowledge excellence in research We would like to congratulate the authors of these two papers      Official Gazette of the United States Patent and Trademark Office ,1999      **Reliability Abstracts and Technical Reviews** ,1967      Official Gazette of the United States Patent and Trademark Office United States. Patent Office, 1970      ICCCE 2021 Amit Kumar, Stefan Mozar, 2022-05-15 This book is a collection of research articles presented at the 4th International Conference on Communications and Cyber Physical Engineering ICCCE 2021 held on April 9 and 10 2021 at CMR Engineering College Hyderabad India ICCCE is one of the most prestigious conferences conceptualized in the field of networking and communication technology offering in depth information on the latest developments in voice data image and multimedia Discussing the latest developments in voice and data communication engineering cyber physical systems network science communication software image and multimedia processing research and applications as well as communication technologies and other related technologies it includes contributions from both academia and industry This book is a valuable resource for scientists research scholars and PG students working to formulate their research ideas and find the future directions in these areas Further it may serve as a reference work to understand the latest engineering and technologies used by practicing engineers in the field of communication engineering      **Computational Neuroscience** J.M. Bower, 1999-07-08 This volume includes papers originally presented at the 7th annual Computational Neuroscience Meeting CNS 98 held in July of 1998 at the Fess Parker Doubletree Inn in Santa Barbara California The CNS meetings bring together computational neuroscientists representing many different fields and backgrounds as well as many different experimental preparations and theoretical approaches The

papers published here range from pure experimental neurobiology to neuro ethology mathematics physics and engineering In all cases the research described is focused on understanding how nervous systems compute The actual subjects of the research include a highly diverse number of preparations modeling approaches and analysis techniques Accordingly this volume reflects the breadth and depth of current research in computational neuroscience taking place throughout the world

**Fault Analysis in Cryptography** Marc Joye, Michael Tunstall, 2012-06-21 In the 1970s researchers noticed that radioactive particles produced by elements naturally present in packaging material could cause bits to flip in sensitive areas of electronic chips Research into the effect of cosmic rays on semiconductors an area of particular interest in the aerospace industry led to methods of hardening electronic devices designed for harsh environments Ultimately various mechanisms for fault creation and propagation were discovered and in particular it was noted that many cryptographic algorithms succumb to so called fault attacks Preventing fault attacks without sacrificing performance is nontrivial and this is the subject of this book Part I deals with side channel analysis and its relevance to fault attacks The chapters in Part II cover fault analysis in secret key cryptography with chapters on block ciphers fault analysis of DES and AES countermeasures for symmetric key ciphers and countermeasures against attacks on AES Part III deals with fault analysis in public key cryptography with chapters dedicated to classical RSA and RSA CRT implementations elliptic curve cryptosystems and countermeasures using fault detection devices resilient to fault injection attacks lattice based fault attacks on signatures and fault attacks on pairing based cryptography Part IV examines fault attacks on stream ciphers and how faults interact with countermeasures used to prevent power analysis attacks Finally Part V contains chapters that explain how fault attacks are implemented with chapters on fault injection technologies for microprocessors and fault injection and key retrieval experiments on a widely used evaluation board This is the first book on this topic and will be of interest to researchers and practitioners engaged with cryptographic engineering

Emerging Technology and Architecture for Big-data Analytics Anupam Chattopadhyay, Chip Hong Chang, Hao Yu, 2017-04-19 This book describes the current state of the art in big data analytics from a technology and hardware architecture perspective The presentation is designed to be accessible to a broad audience with general knowledge of hardware design and some interest in big data analytics Coverage includes emerging technology and devices for data analytics circuit design for data analytics and architecture and algorithms to support data analytics Readers will benefit from the realistic context used by the authors which demonstrates what works what doesn't work and what are the fundamental problems solutions upcoming challenges and opportunities Provides a single source reference to hardware architectures for big data analytics Covers various levels of big data analytics hardware design abstraction and flow from device to circuits and systems Demonstrates how non volatile memory NVM based hardware platforms can be a viable solution to existing challenges in hardware architecture for big data analytics
