Patel, 2000-01-03 This book offers an explanation of the specific ways that biocatalysis outperforms chemical catalysis by utilizing ambient temperature and atmospheric pressure to minimize problems of isomerization racemization and epimerization employing microbial cells and enzymes that can be immobilized and reused over many cycles and overexpressing enzymes for greater economy and efficiency **Subtilisin Enzymes** Richard Bott, Christian Betzel, 2013-11-11 Subtilisin is the most extensively studied model system for protein engineering The primary motivating factor for the interest in subtilisin is the commercial utility of this class of proteases The subtilisin symposium was the first international meeting to bring together a large number of groups that have focused on the subtilisins and the subtilases the protein superfamily of subtilisin like enzymes The results presented at the symposium are in this way a unique compendium of a broad spectrum of work largely focused on harnessing the potential of site directed mutagenesis to understand and deliberately alter the function of these enzymes toward a desired end This sort of protein engineering has been extremely successful in subtilisin with many such engineered enzymes now widely used in commercial enterprises In this regard the experience derived from subtilisin does represent practical protein engineering It is becoming clear that subtilisin represents a larger class of enzymes the subtilases that include many of the human pro hormone converting enzymes As international collaborative efforts to sequence entire genomes continue we can reasonably expect that additional members of the subtilase class will be encountered Whenever interest in a member of this class of enzyme arises the work on subtilisin will serve as a guide to the analysis for what in bacillus fungi and industry is an everyday workhorse enzyme Amino Acids, Peptides and Proteins J S Davies, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 90 years The Royal society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered

their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *Class 2*
