Enzymes Of Biological Membranes Vol 1 Membrane Structure And Dynamics:

The Enzymes of Biological Membranes A.N. Martonosi, 2012-12-06 In the first edition of The Enzymes of Biological Membranes published in four volumes in 1976 we collected the mass of widely scattered information on membrane linked enzymes and metabolic processes up to about 1975 This was a period of transition from the romantic phase of membrane biochemistry preoccupied with conceptual developments and the general properties of membranes to an era of mounting interest in the specific properties of membrane linked enzymes analyzed from the viewpoints of modern enzymology The level of sophistication in various areas of membrane research varied widely the structures of cytochrome c and cytochrome b5 were known to atomic detail while the majority of membrane linked enzymes had not even been isolated In the intervening eight years our knowledge of membrane linked enzymes expanded beyond the wildest expectations The purpose of the second edition of The Enzymes of Biological Membranes is to record these developments The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes In the second volume the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed The third and fourth volumes review recent developments in active transport oxidative phosphorylation and photosynthesis

Electromagnetic Fields and Biomembranes M. Markov, 2012-12-06 The First International School on Electromagnetic Fields and Biomembranes took place in Pleven Bulgaria on 6-12 October 1986 It was designed as an advanced course through a collaboration of the Biological Faculty of Sofia University and the Council of the Bioelectrochemical Society In an advanced course the lecturers are specialized in particular areas and the students are usually specialists in related areas We have captured the expertise of both groups of participants in this volume The longer papers prepared by the lecturers are joined with the shorter papers based on the posters presented by the students to provide a summary of the school as well as an indication of current research directions in the field The course was designed to provide the latest information about biomembrane structure and function covering the properties of both the lipid matrix and the recently characterized proteins that function as specialized channels and receptors Real membranes and various models were covered with an emphasis on understanding their mechanisms of interaction with various exogenous stimuli e.g. electric magnetic light etc Several practical applications of this information e.g. electroporation electro fusion were also presented with indications of the possibilities for new developments in biotechnology The mixture of basic science with practical applications together with the intermingling of lecturers and students from many different countries produced a stimulating atmosphere and effective teaching We hope that this volume will transmit some of this atmosphere

Progress in Botany H.-Dietmar Behnke,Karl Esser,Klaus Kubitzki,Michael Runge,Hubert Ziegler,2012-12-06 The 50th volume of Progress in Botany appears in new guise In cooperation with Springer Verlag we have changed from the less attractive typewriter composition to the direct reproduction of a manuscript which was written by means of a text editing system and produced by a laser printer We the editors should like to take the appearance of Volume 50 as the occasion for a few short remarks Our younger readers are perhaps not aware that our Book Series was founded in 1931 by Fritz von Wettstein based on the following thoughts and considerations aptly formulated by him in the Preface to the first volume One of the greatest dangers threatening progress in the science of botany is the absolutely unbelievable growth in volume of the literature The quality of journals books and individual works that are daily sent to us makes it impossible for anyone person to maintain a general view of the progress made in botany in all the specialized fields let alone to find time for results from associated subjects For varying reasons every botanist must find this state of matters insupportable Let us endeavor in the general interest to retain a wide background of knowledge and not become limited specialists The vitally necessary

connections between the specialized fields can only flourish or even exist if the general view of botany as a whole can be maintained

Textbook of Biochemistry Thomas M. Mobility and Proximity in Biological Membranes S. Damjanovich, 2018-01-18 Cell surface membranes have long been characterized as two dimensional fluids whose mobile components are randomized by diffusion in the plane of the membrane bilayer Recent research has indicated that cell surface membranes are highly organized and ordered and that important functional units of membranes appear as arrays of interacting molecules rather than as single freely diffusing molecules

Mobility and Proximity in Biological Membranes provides an overview of the results obtained from biophysical methods for probing the organization of cell surface membranes These results are presented in the context of detailed treatments of the theory and the technical demands of each of the methods The book describes a versatile and easily applied mode for investigating molecular proximities in plasma membranes in a flow cytometer Its analysis of lipid fluidity and viscosity of membranes and the rotational mobility of proteins offers intimate insight into the physical chemistry of biological membranes The electrophysiology of lymphocytes is presented with focus on its importance in different diseases New techniques are described and new data new possibilities and future trends are presented by world experts This book s chapters can serve both as guides to the existing literature and as starting points for new experiments and approaches associated with problems in membrane function
